Types **UP** and **UPT** capacitors are small, conveniently-mounted, round can-type electrolytic units furnished with bakelite and metal mounting washers. Terminals are tinned for soldering. They are dependable in operation over wide temperature variations with minimum capacity change.

Units are especially designed for use in television, radio, amplifier and other equipment where extremely high temperatures, voltage surges and ripple currents are encountered. They are particularly popular as replacement capacitors for all standard television receivers.§

Type **UPE** units are designed for use in selenium rectifier circuits. When using selenium rectifiers in televison, radio or other equipment, care must be taken to employ **ONLY** this type electrolytic capacitor and protective resistor—See page 6.

SELENIUM RECTIFIER CAPACITORS

Type **UPE** are etched anode and cathode units *especially* engineered to prevent capacity drop due to high ripple and surge currents normally encountered in selenium rectifier circuits. *A protective series-resistor of approximately 50 ohms for a 100 ma. load, and at least 10 ohms for a 250 ma. load, should always be used to protect both the rectifier and filter capacitors. Use only type UPE in selenium rectifier circuits.*

MOLDED TUBULAR CAPACITORS

"THE CUB"

The Cornell-Dubilier "CUB" is an *outstandingly superior* molded tubular capacitor unequaled by any molded tubular heretofore developed.

The "CUB" possesses characteristics that will meet the wide and demanding applications found in critical industrial, military and experimental electronic equipment.

This is **the** unit recommended for general replacement service.† Sold exclusively through C-D electronic parts Distributors.

The "CUB" is molded in extra hard, non-inflammable bakelite—tough, durable and exceptionally resistant to moisture, high temperature and shock.

The unit is processed by special vacuum—temperature—cycling impregnation—the 200 and 400 volt series are impregnated with HT compound and the 600 volt and up series are impregnated with oil (Dykanol "C").

In countless production test runs, the "CUB" has survived an average of 30 cycles of the punishing JAN and MIL Temperature and Immersion Cycling Test.

The "CUB" is dry assembly processed and sealed immediately *after* impregnation. This advanced technique results in life long high insulation resistance, low power factor, and exceptional capacitance stability. Each unit is tested at over two times its rated voltage to insure high dielectric strength.

At least a 50% greater resistance to humidity and a 15%-25% greater voltage breakdown over comparable molded tubulars, is built into the C-D "CUB".

Extra strong copper-weld leads eliminate breakage during assembly and throughout service life. The leads are permanently crimped and solder sealed securely to the unit and will not part during soldering operation.

TEMP. RANGE: HT Compound —40°C to +90°C
Dykanol "C" —55°C to +100°C

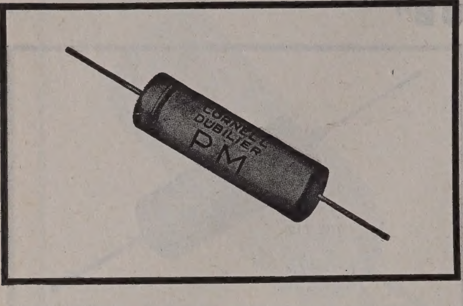
MOLDED MYLAR* TUBULARS



MYLAR* Polyester Film MOLDED TUBULAR CAPACITORS

Cornell-Dubilier's new PM SERIES of molded tubular capacitors are designed to meet the need for a rugged, high-temperature MOLDED unit. These are fabricated with the Du Pont Company's latest new dielectric material, "MYLAR" which maintains excellent electrical characteristics at temperatures up to +130°C. Over the temperature range of from −55°C to +100°C full rated voltage can be applied, and to +130°C voltage is derated only to 75%. Insulation resistance values are exceptionally high at any operating temperature and capacitance variation with thermal change is relatively small. The dielectric absorption and the power factor of the new capacitors is unusually low.

Non-inductive construction is employed with lead wires securely soldered to the extended foils, insuring low resistance connections and low radio frequency impedance. The durable thermosetting plastic case construction holds copperweld lead wires and sections firmly in place to withstand extremes of handling, soldering temperatures, vibration and shock.

Standard sizes in 400, 600, 1000 and 1600 VDC ranges are listed in the accompanying table.

*DU PONT trade mark.

STEATITE-CASED TUBULAR CAPACITORS

BUDROC STEATITE-CASED TUBULAR PAPER CAPACITORS

C-D "BUDROC" capacitors are made with non-inductive paper and extended foil elements housed in the finest grade ceramic (steatite) tubes with Polykane end-seals. "BUDROCS" are designed and especially recommended for *manufacturing* applications. Except for the C-D molded tubular "CUB", the C-D "BUDROC" surpasses the performance of any molded tubular unit available.

The steatite tube provides exceptional protection against heat and humidity. The Polykane end-fill is tightly bonded to the steatite tube and lead wires, cannot soften, melt or flow at any rated operating temperature. This assures a permanent seal to moisture and humidity besides providing a rigid support for the lead wires.

TEMPERATURE RANGE:

"BUDROC" capacitors rated up to and including 400 VDCW are impregnated with high quality HT compound (—40°C to +90°C). Units rated above 400 volts VDCW are impregnated with C-D Vikane (—55°C to +100°C).

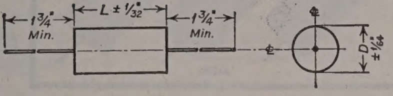
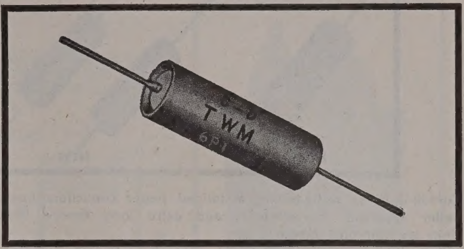
MINIATURE METAL-CASED TUBULARS "DEMICONS"





The Cornell-Dubilier series of "DEMICON" capacitors offer miniaturized tubular metal-cased units designed and processed to meet rigid and severe operating requirements particularly where space limitations are an important factor.

Unique and improved manufacturing processes have contributed to a product of unusual stability, dependability, and longevity, as attested to by field-test proven service over a long period of time.

Cornell-Dubilier DEMICONS are hermetically sealed in metal cases, with glass-to-metal seal terminals and are available in a wide variety of mounting styles, impregnants, tolerances, and internal construction. See Bulletins NB-147 and NB-151.

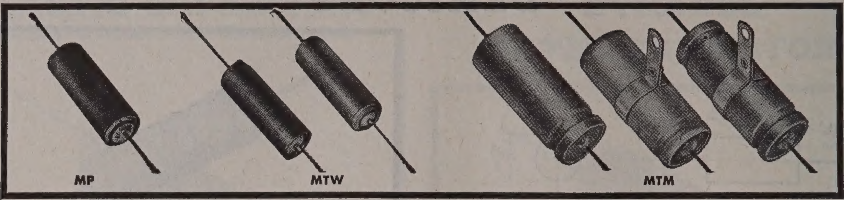
CORNELL DUBILIER

COMPACT METALIZED-PAPER CAPACITORS



Cornell-Dubilier self-healing, metalized paper capacitors have better electrical characteristics and extra long service life. Units are light and compact.

"PUP" units have bare wire leads securely anchored in metal end-caps, wax-impregnated and dip-sealed against humidity. All units are extended foil—non-inductive wound for low impedance at high frequencies, have high insulation resistance, low power factor and small capacity change with temperature and life.

"METAPUPS" are one piece metal tubular cased, pressure sealed by spin-over on synthetic rubber gaskets.

"SEALPUPS" are a high quality metalized paper capacitor, designed for smallest size and positive seal against moisture. They are hermetically sealed in metal cases with solder—seal glass terminals. Especially recommended in military and commercial equipment where miniature size and light weight are paramount.

For further data on C-D metalized capacitors, write for Bulletins 142-3-4 and NB-152.

TEMPERATURE RANGE: —40°C to +60°C.

HIGH TEMPERATURE Metalized-Paper CAPACITORS

- **POLYKANE-IMPREGNATED:** This impregnant insures excellent electrical properties over long service life.
- **MOISTURE RESISTANT:** MTX tubulars have the finest glass-to-metal solder seal terminals for maximum protection against moisture. MPX tubulars have POLYKANE-impregnated paper tubes, bonded securely to the POLYKANE fill. An external flash wax dip provides an increased moisture seal for extra long storage and service conditions under extremes of humidity.
- **NON-LEAKING:** "POLYKANE" is a solid thermosetting plastic that will not soften, crack, or leak at the maximum temperature. No oil or wax is used internally with these units.

FEATURES OF "MITYMIKE" HIGH VOLTAGE CERAMIC CAPACITORS

- **New, superior design and construction.**
- **Generous factor of safety permits use at FULL rated voltage.**
- **High insulation resistance, low power factor.**
- **Choice of terminal styles to meet all TV assembly requirements.**

The C-D Universal Type MMU "MITYMIKE" is an entirely new and superior quality unit developed from extensive field experience over a long period. Weaknesses heretofore found in this type capacitor have been eliminated by C-D processing techniques.

Thus, the special quality encasing material forms a complete homogeneous bond between all elements and the ceramic dielectric. The permanent bond between the casing material and the ceramic element prevents formation of corona, hence preventing deterioration of the capacitor.

High purity silver electrodes are heat-bonded to the dielectric — and the silver-plated terminal studs in turn, firmly soldered direct to the electrodes.

A high degree of operating stability in service and extended life can be expected of the C-D MMU.

Six selected terminal styles are furnished with each body, permitting many combinations of terminals to cover a wide range of installation designs.

Because of the superior materials and quality construction of the MMU, a generous factor of safety is built into the "MITYMIKE", allowing operation at FULL RATED VOLTAGE.

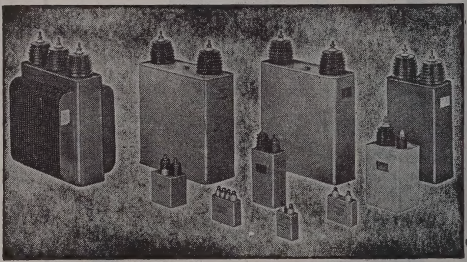
CAPACITOR NETWORKS



These capacitor networks are designed for radar and industrial equipment where the normal (exponential) capacitor discharge shape is not suitable and where an impulse having a definite energy content and duration is required.

General Electric pioneered in the development of mineral-oil-treated paper dielectric capacitor networks for air, sea, and land radar, and was a prime supplier for the government services. The products supplied varied from the miniature types used with aircraft and guided missiles to the large designs for land-based radar.

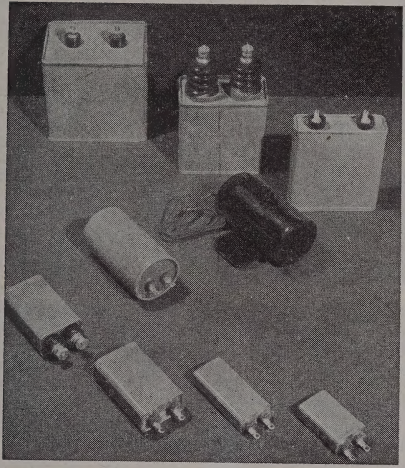
STANDARD COMMERCIAL TYPES

For A-c and D-c Applications — Fixed Paper-dielectric Capacitors



A-c/d-c dual-rated Pyranol capacitors for motors, controls luminous-tube transformers, electronic equipments, and other applications will reduce inventories, simplify design problems, and increase standardization. Capacitors in the voltage ranges 236 through 660 volts, a-c, and 400 through 1500 volts, d-c, are now dual-rated and can be used for either a-c or d-c applications. Other a-c and d-c ratings available: 0.01 to 75 microfarads, 236 to 660 volts, a-c, and 400 to 100,000 volts, d-c.

Because of the high dielectric strength, high permittivity, and exceptional stability of Pyranol, its use as a treating material has made possible a capacitor far superior to those formerly available and much smaller in size.

Design Advantages

(1) Units are small and compact, because of the use of Pyranol.

(2) A wide range of ratings is available in rectangular, cylindrical, and oval cases.

(3) Three styles of mounting brackets are available and are supplied separate from the units. Units may be operated in any position.

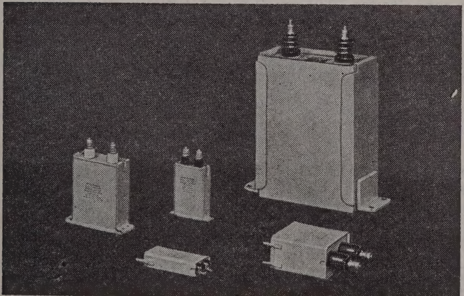
Case Style 70



Case Style 70 units with various types of terminals and removable mounting brackets

These Pyranol fixed paper-dielectric capacitors in Case Style 70 are hermetically sealed in rectangular cases. This line includes standard ratings, ranging from very small units weighing only three ounces to large high-voltage units weighing up to 175 pounds.

All are of single-action construction, with a capacitance tolerance of ±10 per cent. Cases are isolated and the two bushings are brought out through the cover. Units in 600-, 1000-, and 1500-volt ratings are available with either solder-lug terminals or with pillar-insulator terminals. All higher-voltage ratings have pillar-insulator terminals. These units may be operated in altitudes up to 7500 feet.

Up to 600 volts d-c, bushings with solder-lug terminals are made of G-E silicone; above this rating, they are of phenolic-cup construction. Bushings with pillar-

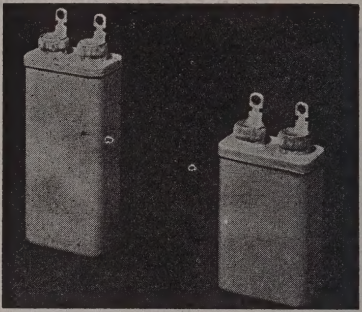
Case Style 60



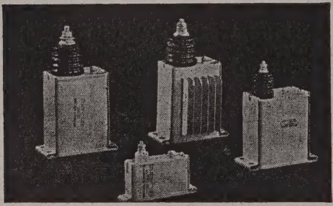
These small rectangular-case fixed-paper-dielectric units are of narrower width than the "bathtub" units, and will fit into a very restricted panel surface, where case height is not the limiting dimension. Mounting lugs, of either the removable or attached type, are of very sturdy construction.

These units have solder-lug terminals, and are available in either single- or dual-section construction for all circuit diagrams.

The metallic containers are hermetically sealed, and of deep drawn construction.

Case Style 60 units have no brackets, but removable brackets of either the footed or spade-lug type can be supplied.

CAPACITORS FOR OSCILLATOR TANK CIRCUITS



This line of fixed paper-dielectric capacitors has been developed primarily for grid and plate blocking service in the electronic oscillator circuits of high-frequency induction-heating equipments. They can also be used to advantage in other high-frequency oscillator circuits of a similar nature.

G-E high-voltage paper-dielectric capacitors are of relatively high capacitance (0.01 mu f) for high-frequency units, yet they are more economical than conventional high-frequency units of considerably smaller capacitance values. They can, therefore, be applied with savings in cost as well as reduced losses and lower voltage drop across the capacitor.

features

- Hermetically sealed in metallic cases.
- Single-bushing construction for minimum size.
- Removable mounting brackets.
- Internal lead connections arranged for minimum inductance.

METAL-CLAD AND TANTALYTIC CAPACITORS

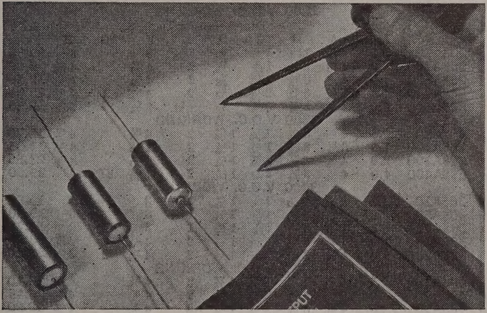
SUBMINIATURE METAL-CLAD TUBULAR CAPACITORS

Pyranol* Filled

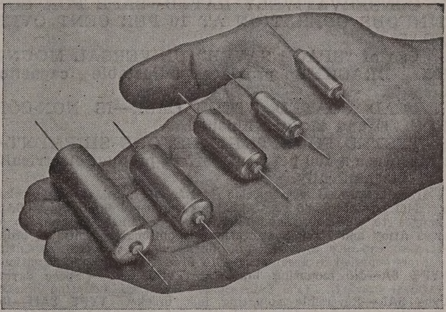
These capacitors with a Pyranol liquid dielectric and silicone end seals will operate from —55 C to +85 C without derating.

Twenty per cent smaller than comparable oil-filled units, they are the same size as the old-style wax units but have superior life characteristics. The silicone end seals, of all-welded construction, provide maximum resistance to thermal and physical shock and permit soldering up to the bushing without danger of seal damage. In addition, in severe humidity conditions, the new silicone end seal permits a polarized voltage to be applied to the capacitor.

They can be supplied in standard case sizes, in either tab or exposed foil designs, with ratings from 0.001 to 1.0 μf, and in voltage ratings of 100, 200, 400, and 600 volts, d-c.



Permafil Solid Dielectric



Subminiature metal-clad tubular capacitors are made with silicone end seals and a solid dielectric Permafil, for operation from —55 C to +125 C without derating. With small size, no liquid leakage, and high insulation resistance, they will withstand extreme temperature cycling. The new silicone end seals with all-welded construction permit leads to be soldered next to case without damage to seal, and also allow a polarized voltage to be applied under severe humidity conditions.

Meeting all military requirements, capacitors can be supplied in both tab and exposed foil designs.

Ratings range from 0.001 to 1.0 μf in voltage ratings of 100, 200, 400, and 600 volts, d-c. Cases are available in standard sizes from 0.235″ diameter and $\frac{11}{16}$″ length to 1″ diameter and 2⅝″ length.

TANTALYTIC CAPACITORS FOR LOW-VOLTAGE USE

The Tantalytic capacitor is designed for certain direct-current, low-voltage applications where aluminum electrolytics and paper capacitors are not entirely satisfactory, and is suggested for use where superior performance and small size are the major factors.

This capacitor is a foil-type, tantalum-electrode, electrolytic unit, similar in construction to an aluminum electrolytic capacitor, but smaller in size because of the characteristics of the tantalum foil and the electrolyte employed (compare with match book in illustration). The Tantalytic capacitor has lower leakage currents, longer shelf life, and a wider range of temperature operation (—55 C to +85 C), without derating, than the conventional aluminum electrolytic capacitor. Tantalytic capacitors, in a wide range of ratings, are currently being used in telephone equipment and military communication and ordnance equipment.

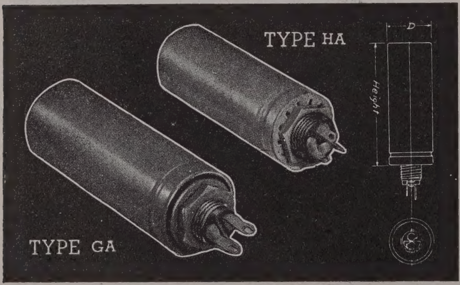
TYPES "GA" and "HA" OIL FILLED

These inverted mounting capacitors fill a definite need where chassis space is the prime factor.



Types "GA" and "HA" are INCCO Oil "A" impregnated and filled. The case is a one-piece metal extrusion with a "locked-in" molded neck. This construction meets and surpasses the Army and Navy requirements for a submersion-proof capacitor.

Type "GA" is available in the twelve standard ratings listed below, but can also be supplied in other capacities and/or voltages to manufacturers' specifications.

In the standard "GA" and "HA" types the container is insulated. A grounding lug can be supplied for connecting one terminal to the case. Fiber washer for insulating container from chassis, when case is grounded, and insulating cover for insulating the container from adjacent equipment, can also be supplied on special order.

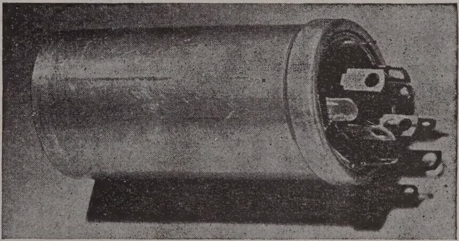
ET SERIES ELECTROLYTIC CAPACITORS



"ET" series capacitors have been designed for ease in installation and reliability. They are constructed to withstand the most severe operating conditions encountered in industrial and electronic equipment. Especially controlled manufacturing processes insure that the equipment in which these capacitors are used will function without interruption. Capacitors can be supplied for operation at temperatures ranging from minus 40 to plus 85 degrees Centigrade. Mounting is effected by inserting the capacitor through the slots in either the chassis or mounting plate, and twisting the mounting prongs 90 degrees.

Type MM

An extremely popular type of condenser due to its exceptional high quality and midget size. Hermetically sealed in a small metal case and scientifically vented, to protect against adverse operating conditions of voltage, temperature and humidity. Container is insulated by a high grade tube which is spun over the ends of the can to eliminate shorts when wires are bent close to container. Easily mounted by their rigid wire leads.

Type SM

Type "SM" units are embedded in a high temperature wax and then sealed in a thoroughly impregnated cardboard tube, affording complete immunity to moisture penetration. New high voltage formation gives complete protection against surges and high peak voltages. The addition of the strap mounting bracket has proved favorable in its use due to its wide application in AC-DC and portable sets in the replacement field. The strap can be moved to the best mounting position and then bolted or soldered. Supplied with color-coded, Underwriters' Approved, rubber covered leads.

RADIO INTERFERENCE ELIMINATORS

INDUSTRIAL CONDENSER CORP. has made a special study of the suppression of noises caused by fluorescent lighting. No. 7249 capacitor is designed with three leads, two leads to be connected across the 110 volt line and the single lead to be grounded. No. 4219 is housed in a metal container and is self grounding. It is supplied with strap mounting for easy installation. No. 4252 is a flat type unit designed to mount on the ballast support of circline ballasts. The convenient mounting flap grounds the unit when the stem of the lamp is placed through the mounting hole.

GENERAL INFORMATION

Technical Information Available in Catalog 1117A

Stabelex Capacitors represent a new series of capacitors being made available to industry for the first time.

Advancements in science and industry have created the need for capacitors having characteristics far superior to either laboratory type or commercial capacitors now available.

Advanced designs in equipment which have not been possible because of the unavailability of suitable capacitors have now become practical.

The Stabelex family of capacitors has been developed after a long period of research and has been made for special applications for quite some time. However, it is only now that these capacitors became available to industry.

Other Stabelex capacitors will be announced from time to time, each having its own special characteristics for use in applications for which they are most suited.

Suggested Applications

Input Capacitors	Computers
Coupling Capacitors	Filter Networks
RC Circuits	Radio Frequency Circuits
Meter Damping	Etc.

Many variations and special characteristics are possible with Stabelex capacitors that are not possible with any other type and it is, therefore, to the interest of the user to indicate, where possible, the application to which these capacitors will be put.

TELEVISION • TRANSMITTING • INDUSTRIAL

HIGH VOLTAGE MICA CAPACITORS

DC WORKING VOLTAGES: FROM 1000 TO 2500 VOLTS

Molded in CM-20, CM-35 and CM-40 Cases

Demand for smaller units in higher voltages designed to meet the requirements for Television, Power Amplifiers, Low Power Transmitters, and various Industrial Uses has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of Television Receivers.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. No Special Mountings Are Necessary; just wire right into the circuit.

The capacitors are molded in low-loss bakelite and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient, capacitance drift, susceptibility to humidity, and length of life, according to RCM Standards. All units are wax-dipped for protection against salt water immersion.

PAPER TUBULAR CAPACITORS CP TYPE

El-Menco CP type paper tubular capacitors are sealed into Steatite Tubes which serve to insulate the capacitor electrically as well as against moisture and heat. The capacitor insert is impregnated with Mineral Oil, thereby assuring long life at 85° C operating conditions. This feature insures successful operation at the high ambient temperatures existing in small, compact enclosures.

The Non-Inductively wound paper and foil units are sealed in the Ceramic Tubes by means of baked Synthetic Resin End Fills which cannot melt at any conceivable operating temperature. The end fills will not dissolve in wax, permitting the capacitors to be potted without damage to in the insert. Leads are of tinned copper 2¼″ long.

Many of the large Television, Transmitter and High Voltage Amplifier manufacturers have found these capacitors to be of highest quality. Breakdown tests have exceeded the required standards.

El-Menco CP type paper tubular capacitors are sealed in impervious steatite ceramic tubes through use of synthetic resin end fills which are waterproof and will not melt at any conceivable operating temperature. The non-inductivity wound paper and foil inserts are mineral oil impregnated. This combination of fine quality material and construction insures long life at high ambient temperatures, indefinite shelf-life and trouble-free operation under the most adverse conditions.

MIDGET TRIODE COUPLING

CUP CERAMICS

- These precision capacitors are widely used in high stability r-f oscillators where frequency control is important. Tolerance on capacitance can be held to ± 1%, and on temperature coefficient to ± 10 ppm.
- Hermetically sealed construction and low self inductance are noteworthy as are high Q, capacitance stability, and retrace characteristics.
- Available in 500, 1000, 1500 volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details.

PRECISION TUBULARS

- Designed for exacting circuitry in electronic instrumentation and high stability oscillators. The same stacked disc construction as metal cup ceramics but with higher capacitance range.
- Hermetically sealed in plated metal tubes for moisture protection. Rated for −55°C to +85°C operation as are cup ceramics
- Available in ±1% capacitance tolerances!
- Available in 500, 1000, 1500 volt ratings for all standard temperature coefficients from P100 to N750. Write on company letterhead for complete details

CERAMIC TRIMMERS

- Widely used in military equipment and precision circuitry where maximum stability is required — Characteristics remain constant under most severe vibration and atmospheric conditions
- Unlike ordinary low cost trimmers, the special construction of these top-quality units prevents corrosion, permits mounting against chassis, and guarantees long, trouble-free life

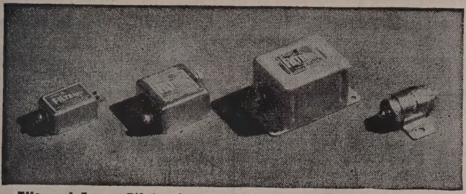
FILTEROL® TYPES



Filterol 1 **Filterol 2** **Filterol 3** **Filterol 4**

- Suppress Man-made Radio and TV Interference
- Small, Completely Self-contained
- Quickly, Easily Installed

Filterol Types 1, 2, and 3—Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4—A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

IF-15—TRIPLE-SECTION FILTER for all small motor-operated devices such as food and drink mixers, vacuum cleaners, fans, drills, etc. Especially designed to prevent accidental shocks from discharge of filter capacitors.

IF-11—DUAL HIGH-CAPACITY FILTER with completely enclosed safety construction. Designed for use on motors over 1 horsepower and up to 220 volts AC or DC. Also used on high-current arcing or sparking devices.

IF-21—COMPACT DUAL FILTER for use across brushes of fractional horsepower motors with the can grounded to motor frame. May also be used across line terminals of motors.

IF-S1—SINGLE SECTION 2-LEAD FILTER with can completely insulated. For use across make-and-break contacts, such as thermostats, circuit breakers, door-bells, buzzers, relays, etc.

IF-37—3-SECTION DELTA-CONNECTED FILTER especially designed for fluorescent fixtures. Only one IF-37 required for each offending fixture. Also effective on make-and-break governor-type motors. Underwriters' Laboratories approved.

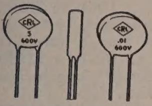
CERAMIC CAPACITORS

MOLDED DISC CERAMIC HI-KAPS®
For Bypass, Coupling and General Applications



Molded disc ceramics feature highest available breakdown to ground, highest lead strength, and resistance to mechanical damage, closest tolerance. "MD's" can be placed directly against a chassis, or adjacent to high voltage leads without danger of flashover or breakdown. Low inductance makes these units highly efficient in high frequency circuits. They are not recommended for use in resonant or tuning applications. Voltage Rating — Ultra conservative 600 V.D.C.W., 1,800 V.D.C. test. Maintain high capacity and stand up under +85° C. operation. Insulation — Molded Centrathene†. 2,500 V.D.C. breakdown to ground. Electrical properties constant to 3,000 megacycles. Insulation resistance of molding 300,000 megohms. Moisture absorption .005%. Power factor of molding .02%. Fungus resistant. PRINTED ELECTRONIC CIRCUITS (P.E.C.)®

The term "printed circuit" has come to be a catch-phrase to describe anything from a piece of tinfoil cemented on a plastic plate to a carbon-backed piece of adhesive tape. As the pioneer and leader in the field, we designate the true Printed ELECTRONIC Circuit as a complete circuit element . . . wiring, capacitors, and resistors. Centralab Printed ELECTRONIC Circuits offer a combination of resistors and capacitors of ultra-compactness and permanence. No other modern development in electronic circuitry offers so many advantages in low powered applications such as small size, low assembly cost, and utmost reliability. 25,000,000 now in use.

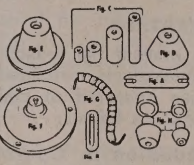
STEATITE



Centralab has been producing fine ceramics since 1928 . . . primarily for its own use in fixed resistors, ceramic capacitors, switches, and more recently, printed electronic circuits. Often called upon by other manufacturers to produce many "standard" and custom designs, some very intricate. Centralab is the only ceramic manufacturer capable of producing many of these in quantity. All items listed are Grade L-5 Steatite, approved without limitation for Army and Navy use. Characteristics: Uniform, white appearance, high dielectric strength, exceedingly low loss at high frequencies, and strong mechanically. Impervious to moisture and common acids, will not warp, withstands high temperatures; harder than hardest quartz.

PYRAMID

METALLIZED
PAPER CAPACITORS

ENGINEERING DATA

GENERAL DATA

The major constructional difference between conventional paper capacitors and metallized paper capacitors lies in the replacement of the separate layers of metallic foil with an extremely thin metallic film, deposited directly on a lacquered surface of the paper dielectric by a high vacuum vaporizing process. This lacquer coating considerably improves the dielectric strength and insulation resistance of the paper.

The metallic films most commonly used are zinc and aluminum. Zinc has a lower melting point and is much easier to apply to the dielectric. It is not, however, as stable as aluminum and yields a slightly higher power factor. Therefore, aluminum coated paper is preferred and used for most metallized paper capacitors produced in this country.

SELF-HEALING CHARACTERISTIC

The unique characteristic of self-healing is derived from the thinness of the deposited film, which is in the order of three millionths of an inch. This film oxidizes, melts or vaporizes away from any conducting particle or other flaw within the dielectric layer when voltage is applied. Thus, the weak particle is isolated from the rest of the winding. This characteristic permits the use of less insulation between the electrodes than is commonly used in conventional capacitors. The combination of a very thin aluminum deposit and less insulation accounts for the marked reduction in volume and weight. This is dramatically shown in the following table:

Rated Voltage DC	Approximate Volume Reduction in % (as against conventional capacitors)
200	75
400	50
600	30

VOLTAGE DATA

Due to the self-healing characteristic, metallized paper capacitors will rarely fail, assuring long life when operated within proper voltage and temperature limits. As a matter of fact, the insulation resistance generally improves with time. Since the insulation is normally highly stressed, the application of over-voltages or excessive temperatures will increase the frequency of sparking. If the over-voltages are of an intermittent, momentary nature, shorts that may develop will clear themselves and the capacitor will continue to operate normally. Should over-voltages be prolonged, continuous sparking will occur, causing carbonization of the impregnant and of the dielectric. Thus, the insulation resistance is rapidly reduced making the capacitor unsuitable. It is for these reasons that accelerated life tests are not considered a reliable measure of the quality of metallized paper capacitors and are therefore not recommended.

The test voltage of metallized paper capacitors is normally not in excess of 150% of the rated working voltage at 25°C. applied for a period not exceeding 5 seconds.

The term "test voltage" as applied to metallized paper capacitors, is taken to mean the value at which the number of sparks is relatively small indicating that the faults have been cleared. The test voltage is applied through a resistance that limits the charging current to 50 milliamperes. The capacitor is then discharged through the same resistance.

DERATING

To prevent the reduction in life expectancy at high temperatures, metallized paper capacitors are derated when operated at ambient temperatures exceeding 55°C. as follows:

Reduction in Operating Voltage from Rated Voltage, in %

Temperature Centigrade	Mineral Wax Impregnant Rating up to 200 VDC	Mineral Oil Impregnant Rating 400 and 600 VDC
55°	0	0
60°	5	5
65°	10	10
70°	15	15
75°	20	20
80°	25	25
85°	35	30
90°	50	40
95°	65	50

INSULATION RESISTANCE

The average value of the insulation resistance of metallized paper capacitors is lower than that of conventional paper capacitors, particularly those with a single paper dielectric where a larger number of conducting paths are present. This is due to the higher voltage stresses employed and to a certain amount of deterioration of the impregnant around the

ENGINEERING DATA — Continued

conducting paths that occurs during self-healing, or clearing of the fault. Because the number of faults cleared varies with the number of conducting paths, the variation in insulation resistance is greater than in conventional capacitors. For most applications, the minimum insulation resistance limits exceed actual circuit requirements.

The insulation resistance measured at 25°C., and for an electrification time of two minutes maximum, equals or exceeds the megohm values listed below. The applied voltage will range from 100 VDC to not more than rated working voltage.

Working Voltage	Capacitance	Minimum Megohms/Mfd.	Capacitor Need Not Exceed Megohm Value of
150 VDC	all capacities	250	750
200 VDC	up to 2. mfd.	500	1500
400 VDC	all capacities	1000	3000
600 VDC	all capacities	1000	3000

LIFE TESTS

A resistance of one ohm per volt to 200 ohms per volt of applied voltage should be connected in series with each capacitor during life test.

Normal life tests are conducted for 1000 hours at DERATED working voltage at 85°C. for hermetically sealed units and 65°C. for non-hermetically sealed units.

As noted previously, accelerated life tests are not recommended. If conducted, however, the applied voltage should be 125% of the DERATED working voltage for 250 hours at 85°C. for hermetically sealed units, and at 65°C. for non-hermetically sealed units.

On completion of tests, the capacity change will not exceed 5% and the power factor will not exceed 1½%.

APPLICATIONS

At radio frequencies, the RF impedance of metallized capacitors is of about the same order of magnitude as for conventional capacitors. They are ideal for use as by-pass capacitors and for use in interference filters. Because of their light weight and small size, they are well suited for use in portable radios, instruments, aircraft noise suppression systems and other communications equipment.

For use in AC circuits, it is important that the capacitor selected have a DC rating in excess of the peak voltage present.

Due to the generally lower insulation resistance they are not recommended for high impedance circuits, coupling circuits, RC timing circuits, RC oscillators, or grid-plate blocking capacitors. The thinness of the aluminum film limits the current carrying capacity of metallized paper capacitors. Therefore, they are not suitable for photoflash circuits or similar heavy current pulse applications.

POWER FACTOR: The power factor limit of metallized paper capacitors is 1% maximum when measured at or referred to 1000 cycles per second at 25°C.

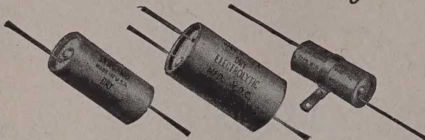
SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE MT-MTD-MTH *Chieftain*



SANGAMO Type MT "Chieftain" electrolytics are especially designed for television and other electronic applications where operation at 85°C. temperatures is required. They are hermetically sealed in round aluminum containers which are encased in heavy insulating sleeves on which polarity is clearly indicated. Being small in physical size they are most popular where mounting in limited space is required — They will fit anywhere and can be mounted in almost any position. Double-thick paper spacers assure adequate breakdown characteristics and all sections are tightly held in place within the container. Multiple staking connects the terminal tabs to the electrodes and provides permanent low resistance contact throughout the life of the capacitor. Low voltage units utilize etched cathodes to maintain uniform capacity when they are subjected to combined conditions of heat and high ripple currents.

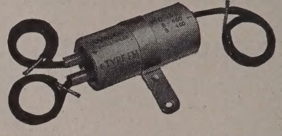
TYPE FM *Arrowhead*



The SANGAMO Type FM "Arrowhead" electrolytic capacitors are similar in design to the Type MT "Chieftain" in every respect except leads. The Type FM is equipped with flexible, insulated wire leads and stud terminals eliminating the problem of crossed wires and the necessity for the use of insulating sleeves. They are much smaller than the wax-end filled types with insulated leads. The capacitors themselves are housed in round aluminum containers which are encased in heavy insulating sleeves. They are especially designed for the rugged television requirements where 85°C. operating temperatures are encountered.

TYPE MMT

MINIATURE TUBES

SANGAMO Type MMT miniature tubular electrolytic capacitors are designed for use in miniaturized equipment and are ideally suited to meet the precise operating requirements of low voltage circuits. They are small in physical size and are self supporting by means of strong bare tinned copper wire leads. The Type MMT capacitors are contained in drawn aluminum tubes encased in a fitted cardboard insulating sleeve. Polarity of all units is clearly marked on the cardboard sleeve.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE PL

FOR TELEVISION AND OTHER ELECTRONIC APPLICATIONS . . .

DRY ELECTROLYTIC

The SANGAMO Type PL "Warrior" electrolytic capacitors are specially designed for all television and electronic applications requiring long life and dependable performance at 85°C under conditions of extreme ripple currents and high surge voltages. They are sealed in round aluminum cans and have twist-prong tabs for washer or direct chassis mounting. The capacitor element current carrying tabs are securely clamped and staked to the terminal lugs, providing permanent, low resistance connections. In all cases the aluminum can is negative and the mounting ring provides the negative electrical connection.

The Type PL has been specially engineered for the rigid TV replacement applications found in all of the leading television receivers manufactured in the industry.

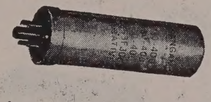
TYPE TS



Ideally suited for all applications where quick capacitor changes are required, the SANGAMO Type TS units are equipped with a four-pin octal base mounting for use with standard octal base tube sockets. The special design of the bakelite octal base insures that the aluminum container will not contact the mounting surface and the connections to the brass pin terminals are imbedded in this bakelite base. The base pins are nickel-plated to prevent corrosion and insure good contact with the socket terminals.

SANGAMO CAPACITORS

ELECTROLYTIC CAPACITORS

TYPE CS *Tomahawk*

SANGAMO
MFD-VDC

The SANGAMO Type CS "Tomahawk" electrolytic capacitors are contained in wax-filled cardboard tubes with insulated leads approximately 8 inches in length extending from both ends of the unit. Capacity, voltage and polarity of each section is clearly indicated by color of the lead wires; coding information necessary to identify the individual sections is clearly stamped on the tube. Each unit is supplied with a mounting strap to facilitate mounting to the chassis.

COLOR CODE OF WIRE LEADS FOR TYPES FM, CS, AND SL CAPACITORS

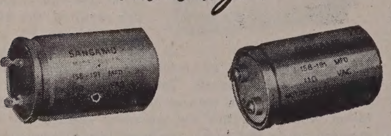
Black	Common negative
Orange	Positive, highest voltage or capacity
Red	Positive, next highest voltage or capacity
Blue	Positive, next highest voltage or capacity
Yellow	Positive, next highest voltage or capacity
Brown	Negative, in separate section unit

NOTE: Lead colors are determined by the rated working voltages. Where there are two or more sections of different voltages and the same capacity, the lead color will designate the voltage; with the same voltages and unequal capacities, the lead color will designate the capacity. If there are two sections with equal capacities and voltages the two lead wires will be in the same color.

NOTE: Based upon proposed R.T.M.A. Color code.

TYPE EM (MOTOR STARTING)

Trailblazer



The SANGAMO Type EM electrolytic capacitor is a standard universal replacement for all motor starter types presently in use, and its dimensions are comparable in every respect. The Type EML is provided with solder lug terminals, the Type EMS being equipped with screw types; otherwise the two units are identical in construction and operational characteristics. Insulating tubes are supplied with both types.

SANGAMO CAPACITORS

PAPER CAPACITORS

TYPE 71 *Seminole*

SANGAMO Type 71 diaclor impregnated and filled paper capacitors have the advantage of light weight, and are smaller than the case size specified by JAN-C-25. Diaclor* is a specially compounded, chemically purified chlorinated dielectric oil. This synthetic impregnant, whose characteristics can be controlled with great uniformity, possesses a high dielectric constant, high volume resistivity, low power factor, high dielectric strength, and is non-inflammable and non-explosive. Type A mounting brackets are supplied with each capacitor as standard equipment. If Type B or C brackets are required, they must be specified when ordering. Either composition rivet or stand-off porcelain terminals can be supplied, and the type desired should be specified.

NEW MOLDING COMPOUND FOR SANGAMO WIRE LEAD MICAS

All SANGAMO wire-lead micas are molded in HUMIDITITE, a new molding compound developed by Sangamo, that gives them moisture resistance characteristics far superior to any others on the market. The standard moisture resistance test described in MIL-C-5A (proposed) Specification requires mica capacitors to offer at least 100 megohms of insulation resistance after ten 24-hour cycles in a humidity chamber at 90% to 95% relative humidity. The best competitive micas barely meet this requirement . . . but Sangamo HUMIDITITE Micas, *under the same conditions*, all tested in excess of 50,000 megohms! For additional information about HUMIDITITE, write for Engineering Bulletin No. TS-111.

Type G ceramic cased capacitors are intended for service where highest voltage and R.F. current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Current ratings of these four sizes as well as detailed information on the Type G5 will be supplied upon request. Terminal plates are designed to permit any usual connecting or mounting practices.

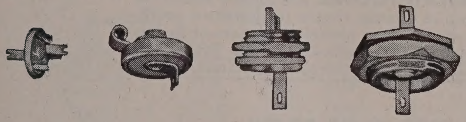
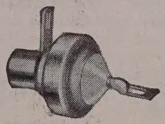
Types SA thru SM are miniaturized, high quality, hermetically sealed paper tubular capacitors. These units are encased in non-magnetic tubular metal cases. Hermetic sealing is accomplished by the use of glass-to-Kovar solder-seal terminals. Types SA thru SM are available in capacities from .001 to 1.0 mfd. and in WDVC ratings from 100 to 1000 volts. They can be operated at temperatures ranging from —55° C. to +125° C. For design convenience, several choices are available with regard to tolerances, circuit assembly, lead styles, mounting brackets, insulating sleeving, and inductive or non-inductive sections. For more complete information write for Engineering Bulletin No. TS-105.



SILVERED MICA BUTTON CAPACITORS

Small and light in weight, these silvered mica buttons are made particularly for high frequency circuit applications. Their high "Q" is indicative of their low loss. Rigidly constructed and electrically and mechanically stable, they meet all requirements of component capacitors for V.H.F. and U.H.F. applications. Tested for dielectric strength and leakage at 1250 V.D.C. (500 W.V.D.C. or 350 W.V.A.C.) . . . capacitance checked at r.f. . . . sealed against moisture for insulation resistance in excess of 10,000 megohms . . . high "Q" value standards at all capacities. Minimum capacitance tolerance limits of ±2% or ±1 mmf. whichever is greater, can be furnished; also buttons with temperature coefficients and drift characteristics up to "E" of the joint Army-Navy specification JAN-C-5. Operating range from minus 50° C. to plus 85° C. For more complete information, write for Engineering Bulletin TS-110.



HERMETICALLY SEALED BUTTONS

Most of the silvered mica button capacitors described in Engineering Bulletin TS-110 can be supplied on special order in hermetically sealed construction, utilizing glass-to-Kovar, solder-seal terminals. This process slightly increases overall capacitor length and provides an absolute moisture seal under all operating conditions. These capacitors may be operated over a temperature range from —55°C. to +100° C. Write for engineering information and prices on special hermetically sealed buttons for your particular applications.

ERIE CERAMICONS are small fixed capacitors consisting essentially of a ceramic dielectric with silver electrodes which are fired on at a very high temperature. Erie Ceramicons are outstanding because of their excellent high frequency characteristics, small size, rugged construction and availability in a wide range of capacity values.

"GP" GENERAL PURPOSE CERAMICONS are ideally suited for such applications as coupling and by-passing, in circuits where temperature coefficient is not important—in other words for all receiver applications *except* in frequency determining circuits. Working voltage—500 volts D. C. Use Erie "GP" Ceramicons as replacements for molded mica and paper tubular capacitors.

NPO Zero Temperature Coefficient CERAMICONS®

NPO zero temperature coefficient Ceramicons are highly recommended for frequency determining applications where no capacity change with change in temperature is desired. "Q" for NPO Ceramicons above 30 mmf is 1000 or higher. Below 30 mmf "Q" decreases slightly as capacity decreases. Working voltage—500 volts D.C. Can be used as replacements for silver mica condensers.

ERIE HIGH VOLTAGE DISC CERAMICONS

Designed to employ the same basic diameters that have been standardized in 500 volt capacitors. Careful and detailed life testing has been accomplished over a long period of time to establish required dielectric thicknesses to assure conservative ratings in the high voltage line.

They differ in appearance from lower voltage units in having greater thickness, the degree of difference depending on voltage rating.

ERIE FEED-THRU CERAMICONS®

These very practical feed-thru capacitors are highly recommended for by-passing R. F. to ground in feed-thru applications. Wire terminals of Style 362 and hook type terminals of Style 327 are sufficiently rugged to serve as tie points for several connections, for supporting other circuit elements, and long enough for point to point wiring. Style 327 is hermetically sealed and ruggedized, and is primarily for military and similar commercial usage.

ERIE STAND-OFF CERAMICONS

Stand-off Ceramicons, an original Erie development, are now widely used for the dual purposes of by-passing R. F. current to ground, and of mechanically supporting other circuit elements. They are especially suited for V.H.F. and U.H.F. applications, due to their low-inductance electrical paths and resultant high resonant frequency.

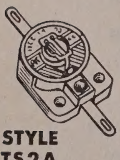
ERIE CERAMICON TRIMMERS



STYLE TS2A

Erie Ceramicon trimmers give maximum stability and ease of adjustment. Capacity change is constant per degree of rotation. Silver electrodes are fired onto ceramic rotor and base. 360 degree rotor completely covers entire track on stator thus preventing dust and other foreign matter from affecting characteristics of the unit.

HIGH CAPACITY ELECTROLYTIC CAPACITORS

These capacitors are available in a wide voltage range. They are hermetically sealed in extruded Aluminum cans by use of a combination Bakelite and rubber washer. Terminal connections and lugs are over-size to handle the high currents normally encountered in these capacitors.

These units are popular for use in electrical circuits having high voltage or ripple currents. Excellent for voltage stabilization and where high current storage capacity is essential.

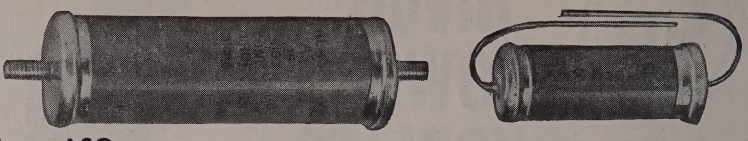
"*Glassmike*" PLASTICON CAPACITORS



Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range —60°C to +85°C, extended range —60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications. All 19/32 diameter Glassmikes are supplied with pigtail leads.

Plasticon dielectric is superior to the finest linen or kraft condenser paper hitherto used. Plasticon is a thin plastic film, free from metallic particles or other foreign matter. Much higher tensile strength than paper and does not become brittle with age and heat. Not porous as paper and has higher breakdown voltage.

"Glassmike" PLASTICON CAPACITORS

Type LSG

LSG type capacitors have Plasticon L film-silicone fluid impregnant in Glassmike style case. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF losses, more conveniently mounted, utilize less chassis space, impervious to moisture and smaller in overall volume.

Here at last is a capacitor that affords ABSOLUTE PROTECTION under every condition — a capacitor you can rely on completely — ASTRON BLUE-POINT, the BONDED capacitor.

This capacitor is produced by an exclusive new design and manufacturing process (patent pending) developed by Astron engineers.

The all-important BLUE POINT which distinguishes this new capacitor actually BONDS itself to the tough, heat-resistant outer shell and leads—forming the TIGHTEST SEAL AGAINST MOISTURE ever produced!

The Blue-Point DRY-ASSEMBLY process — as used in hermetically sealed metal encased capacitors — prevents contamination, provides still further protection against moisture, and assures uniform QUALITY and DEPENDABILITY for every Blue-Point.

The Blue-Point is mineral oil impregnated† for continuous operation at 85°C. The blue point seal itself makes ingenious use of a special thermo-setting, heat-resistant, non-inflammable BONDING AGENT as a positive protection against moisture.

With the Astron Blue-Point, you may solder leads as close to the capacitor as you like. Leads will not pull out, nor will the heat of the soldering iron damage the lead or the connection.

Further, every Blue-Point is clearly marked with rated voltage and capacitance, and is imprinted with outside foil identification.

The Astron Blue-Point Capacitor gives you greater protection against heat and moisture at every stage — assuring long life and dependable performance from EVERY unit — to a degree never before possible with molded plastic capacitors.

From now on, look for the Blue-Point — ask for exclusive Astron Blue-Point Capacitors by name . . . more than ever before, DEPEND ON, INSIST ON . . . ASTRON!

TYPE EY SAFETY MARGIN* TWIST PRONG DRY ELECTROLYTICS

Manufactured under rigid quality control specifications, Astron Type EY twist-prong dry electrolytic capacitors have earned their wide acceptance by radio and TV manufacturers and service technicians. Astron offers a complete line of replacement twist prong dry electrolytic capacitors for all popular television chassis. They are simple to mount by means of twist prong tabs on a mounting plate, or directly on the chassis, in filter and by-pass circuits. The mounting tab ring is electrically welded to the cathode of the capacitor, and serves as the negative terminal. Multiple section units are concentrically wound and have common cathode. Terminal tabs are securely fastened to the terminal lugs, insuring permanent low resistance connections. Compact and hermetically sealed in a seamless aluminum drawn can. Operates at ambient temperatures up to 85°C. Smallest practical sizes. Coding clearly etched on container.

(ASTRON) QUALITY CAPACITORS

ASTRON CORPORATION 255 Grant Ave., E. Newark, N. J.

HY-METS* HIGH TEMPERATURE METALITE® METALLIZED PAPER CAPACITORS

Astron Hy-Mets METALITE® metallized paper capacitors are engineered and constructed for operation over a wide temperature range to 125°C., with exceedingly dependable performance characteristics.

Aside from their extremely small size and unique self healing properties, other outstanding features of Astron Hy-Mets capacitors are exceptionally low power factor and long-life. Excellent RF characteristics are the result of Hy-Mets' extended foil, non-inductively wound construction and amazingly small size. Available in a variety of popular case styles and sizes. All case styles feature glass-to-metal hermetically sealed terminals except the plastic impregnated cardboard tubular MLL. This construction assures high quality performance over the entire temperature range of —55°C. to +125° C., not only under ordinary environmental conditions but also at extreme altitudes and wide variations in atmospheric pressures.

TYPE MLL

These sturdy plastic impregnated cardboard-covered METALITE® capacitors utilize the solid thermosetting impregnant which permits operation up to 125°C. Standard Tolerance: —20% +30%. Lead length 1½" minimum.

Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.

These 1⅝″ diameter units are designed especially for focus control replacement in TV sets. They are 4 watt, wire-wound, and have a special taper. One control, plus accessories and complete instructions per display carton.

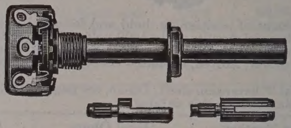
MALLORY MIDGETROL

SINGLE SECTION

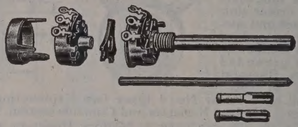


Now the *time-proved* Mallory Midgetrol offers two important new time-saving features.

This sturdy 15/16″ control is supplied with a *permanently fixed, tubular brass shaft* that can be adapted for split-knurl or flatted type knobs in a few seconds by inserting one of the two steel shaft-ends packaged with every Mallory Midgetrol. It gives you utmost convenience—without sacrificing a stable, permanently secured shaft.

Also, switch attachment is made simple and sure by positive indexing. Switch locks securely in position without removing the control housing.

DUAL SECTION



This revolutionary new control can be assembled in five easy steps, in less than five minutes—permits you to match a wide range of combinations immediately from convenient distributor stocks, and without high "time" costs.

The "exploded" view above illustrates the parts and assembled control sections supplied. Extremely simple instructions show you how to assemble them quickly and surely—without soldering—with only the simplest of tools.

Both front and rear sections are *factory-assembled and carefully inspected.* You can be sure that your final dual assembly will give the performance you want!

The Mallory Midgetrol gives you fast, sure, simple installation—with precision-controlled carbon element, smooth taper, quiet operation, accurate resistance value and less drift in TV sets.

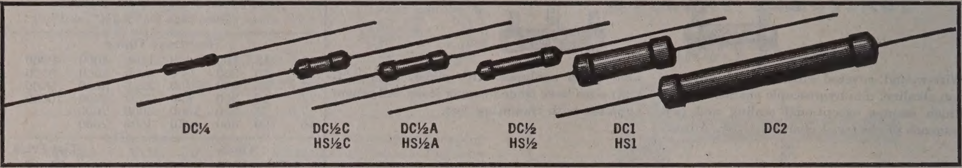
Types HS and DC Deposited Carbon Resistors



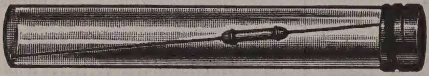
(*Resistors illustrated are approximately ⅔ actual size*)

Type DC ± 1% Deposited Carbon Precision Resistors

Mallory Deposited Carbon Precision Resistors are designed primarily as low-cost replacements for expensive wire-wound resistors in high-quality laboratory instruments. Their unique operating characteristics also make them ideal for replacement or substitution in all radio, television, electronic, or electric circuitry where stability, close tolerance, low-noise, and low inductance are desired. Average shelf life change will not exceed ¼% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

These resistors are formed of pure, crystalline-carbon particles deposited on specially compounded ceramic. Each Mallory Deposited Carbon Resistor is equipped with 1½″ tinned copper, axially-placed leads rigidly attached to silver plated brass end-caps. Baked moisture-resistant insulation is incorporated in construction for protection against humidity. Each resistor is calibrated at a nominal temperature of 25°C. and each has a negative temperature coefficient range of approximately .03% for low resistant values, through .08% for resistances exceeding 1 megohm.

Each unit is inspected according to requirements of accepted government specifications, and each is marked with resistance value, type and tolerance, except the smaller types which have a separate label.



All DC Types are packaged in this dust-free plastic tube, assuring adequate physical protection.

Type HS Hi-Stability Deposited Carbon Resistors

For the first time the well-known advantages of high-stability, low inductance, and small size of Mallory Deposited Carbon Resistors are available at moderate cost for use in many commercial applications where accuracy of resistance is of less importance than the consistency of operation over long periods of time and through many changes of temperature. Average shelf life change will not exceed ¼% per year. One thousand hour load life test indicates a maximum change not exceeding ± 1%.

Television servicemen, laboratory technicians, and model shop engineers, in particular, will find these resistors ideal for critical television and other oscillator circuits where constancy of resistance is of utmost importance. The electrical and mechanical characteristics of HS types are exactly the same as similar DC types, with exception of the resistance tolerance which has been increased to ± 10% of the nominal value. The same quality and temperature coefficient, as featured in the DC types, is maintained throughout.

Type 10-AD
Types 25 KT, 25 NIT, 50 KT, 50 NIT, 120 KT, 120 NIT

- Wound with wire which is insulated **before winding** with a flexible ceramic coating. This coating is impervious to heat as high as 1000°C.
- Each resistor is "tropicalized" by a glazed ceramic outer coating and new type end seals which offer complete protection against moisture or any other climatic conditions
- May be mounted anywhere—even flat against chassis or grounded parts
- Extremely high insulation resistance—10,000 volts from surface of ceramic jacket to inner resistance elements
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes for each wattage rating
- Insulated wire permits true "non-inductive" wound designs

NOTE: ALL NIT TYPES ARE NON-INDUCTIVE

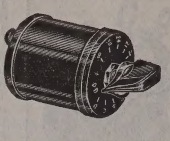
CONSTANT IMPEDANCE CONTROLS

SERIES CIB OUTPUT ATTENUATOR

Rated at 10 watts, will handle up to 30 watts in audio circuit. Linear attenuation in 3 decibel steps up to 30. Black enameled metal case, 2″ dia. by 2¾″ deep. Equipped with dial plate and bar knob. One-hole mounting, ⅜″-32 by ⅜″ bushing. Shaft 1″ long. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.



SERIES CIL AND CIT L-PADS AND T-PADS

Self-compensating volume controls known as L-pads or T-pads for use in sound systems. Rated at 2½ watts DC, but may be used to handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value.

POWER RHEOSTATS

These power rheostats are built for extra-heavy duty. Simplicity of design, plus finest materials and workmanship, result in a unit that provides long, trouble-free service. These Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation, without excessive temperature rise. Standard overall resistance and taper tolerance ±10%. Closer tolerances are available upon special order.

The metal cored winding is embedded in a cold-setting, inorganic cement and is thereby bonded to the ceramic body. This results in the exceptional power dissipation in any portion of the resistance element. These units will withstand elevated temperatures due to severe overloads without smoking, burning, or charring.

A graphited-copper contact shoe in the cradle arm, contacting both winding and collector ring, provides short-path conduction, and at the same time a smooth, consistent mechanical rotation.

Units mount through a single hole. A locking pin is provided for rear panel mounting.

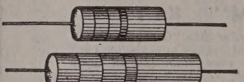
INSULATED CHOKES



IRC Insulated Chokes are available in two sizes designated as types CLA and CL-1. Both types are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

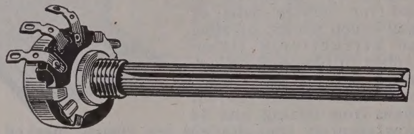
VOLUME CONTROLS

Preferred for Performance

IRC

TYPE Q



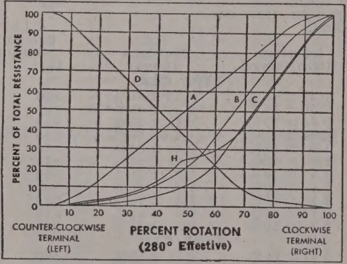
RADIO TECHNICIAN'S VOLUME CONTROL

A volume control engineered to meet the needs of modern radio and TV replacement. Compact 15/16" design is augmented with shorter bushing, only ¼" in length. This tiny control will meet all small set requirements, and yet is capable of handling large receiver replacements. "Cushioned turn" rotation and quiet element combine to provide a modern control of the highest quality.

KNOB MASTER FIXED SHAFT. This is the standard Q shaft. It is a FIXED shaft, and handles most knob requirements. Knurled, flatted and slotted, it fits knurled and spring-type push-on knobs or set-screw knobs. 3" long with ample cross-section to prevent bending.

INTERCHANGEABLE FIXED SHAFTS. Quick replacement of standard fixed shaft to fit any of 13 Interchangeable Fixed Shafts provides ready conversion to "specials." This revolutionary feature is made easy by the IRC Resilient Retainer Ring. These special FIXED Shafts offer all of the advantages of Tap-in Shafts with the added security of fixed shafts. Widest replacement coverage is made possible with a minimum stock. These special shafts are illustrated and explained on the following page.

7 STANDARD TAPERS



A—Used as potentiometer or rheostat in any circuit where uniform resistance change is required.

B—A semi-logarithmic curve used as tone control or audio circuit control.

B—Reverse — not shown on graph.

C—A logarithmic curve. Used as audio circuit control or antenna shunt control.

C—Reverse — not shown on graph.

D—Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is of prime importance in controlling volume.

H—A tapped logarithmic curve used as audio level control of automatic bass compensation.

CONCENTRIC DUAL CONTROLS for TV and Auto Radio

Preferred for Performance

4-PIECE CONCENTRIKITS

IRC CONCENTRIKITS are sets of mechanical parts needed to assemble various IRC Concentric Dual Controls. Kits contain: Panel Cover, Rear Cover, Bushing Assembly or Ground Plate and Mounting Nut. Instruction sheet is included with each CONCENTRIKIT.

In addition to proper CONCENTRIKIT, the following parts are needed for assembly of concentric dual controls: 1—Panel Base-Element; 1—Rear Base-Element; 1—Exact Duplicate Outer Shaft; 1—Exact Duplicate Inner Shaft; 1—Switch—when needed (76-1 or 76-2).

K-2 CONCENTRIKIT. For concentric duals having two carbon sections. Requires Type B Base-Elements. Includes standard bushing, ⅜″ long. **List $.80**

K-3 CONCENTRIKIT. For concentric duals having 2-watt wire-wound panel section (Type W Base-Elements) and carbon rear section (Type B Base-Elements). Includes standard bushing, ⅜″ long. **List $.80**

K-4 CONCENTRIKIT. For certain Motorola concentric duals. Bushing ¾″ long with turned down portion for use as bearing. **List $.90**

K-5 CONCENTRIKIT. For certain Hallicrafter concentric duals. Bushing is ¼″ long. **List $.80**

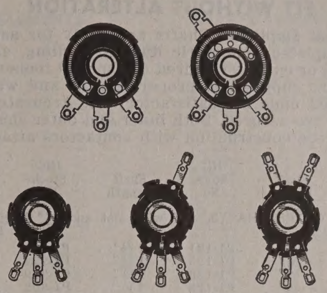
BASE ELEMENTS FOR CONCENTRIKITS



New Base Elements for CONCENTRIKITS are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements in many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts. Two Base Elements are required for each concentric dual.

Two types of Base Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel sections.

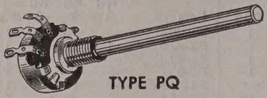
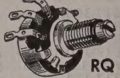
DISTRIBUTOR CONTROLS FOR INDUSTRY



TYPE PQ



RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact 15/16″ Q Control. Power rating is ½ watt, 500 volts maximum. Electrical rotation is the same with or without switch. ⅜″ bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round ¼″ shaft, approximately 3″ from mounting face, with ⅜″ long bushing. Available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

List $1.25

TYPE RQ. Very short screw-driver slot shaft, ¼″ diameter and approximately ½″ long from mounting face with ⅜″ long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ. **List $1.25**

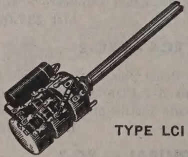
CONTINUOUSLY VARIABLE LOUDNESS CONTROLS



TYPE LCI

IRC Type LCI Continuously Variable Loudness Controls actualy bring high fidelity tone to commercial audio systems — even at whisper level! Only three connections are needed to install the new Type LCI Loudness Control. No special taps or complicated circuits are required. Type LCI's eliminate the need for tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Type LCI's do what these other devices have failed to do.

IRC Loudness Control also can be easily assembled with a standard IRC Type Q Volume Control and two Multisections. Simple assembly instructions are included with each Multisection. All parts, etc.

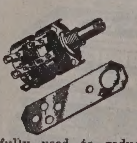
IRC TV ATTENUATOR

Type QJ-3 — FOR ADJUSTMENT OF SIGNAL INPUT



Where excessive signal strength causes poor reception, IRC's Type QJ-3 TV Attenuator readily permits adjustment of signal input at the set. This attenuator has been successfully used to reduce or correct such undesirable conditions as: Adjacent channel interference — Background pictures on weaker stations — Horizontal or vertical patterns in picture — Poor picture definition — Annoying hum or buzz — Picture and sound break-over. Type QJ-3 is easily installed in any TV set.

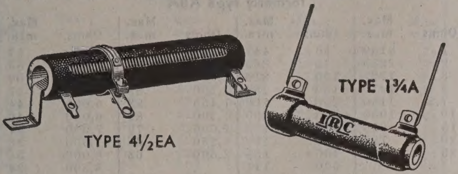
POWER RESISTORS

Preferred for Performance

IRC FIXED AND ADJUSTABLE POWER WIRE WOUND RESISTORS



IRC Power Wire Wounds are rugged resistors specially engineered for dependable heavy duty performance. They are full size, thus continuous operation at full rated power can be maintained. Derating at high resistance values is unnecessary. Special IRC cement coating is noted for its rapid heat dissipation, and protection against humidity. Operating temperatures are lower, thus assuring long life.

All terminals are hot tin dipped for easy soldering. 10 and 20 watt sizes use combination lead and lug terminal from which lugs may be cut for tight space applications. Clear, permanent markings show type, size, watts and resistance. Tolerances: Fixed Types—standard ± 5% for 50 ohms and over, ± 10% below 50 ohms. Adjustable Types—standard ± 10%.

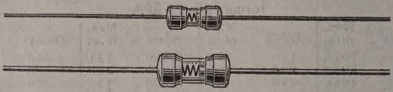
MICROSTAK SELENIUM DIODES



Type GA Microstak Diodes for use in low current circuits where very high back resistance and low forward resistance are required. Miniature selenium cells with outstanding performance characteristics, they are ideal for such applications as A. V. C., switching, blocking and bias supplies. Design and small size give high frequency performance not found in conventional cells — tests prove their successful performance in circuit applications up to 1 megacycle. Hermetically sealed to assure stable operation under high humidity, dust, fumes and changing pressures.

Dimensions: (Type 6GA1) Length of leads — 1½″. Body length — .450″. Diameter — .145″. (Type 9GA1) Length of leads—1½″. Body length—.500″. Diameter — .210″.

PRECISION RESISTORS

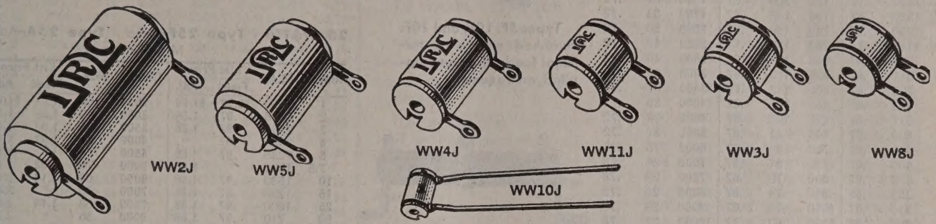
PRECISION WIRE WOUND RESISTORS



A line of precision wire wound resistors for both old and new applications. Completely interchangeable with the long established and familiar types WW-2, WW-3, WW-4, and WW-5 plus new sizes all surpassing MIL-R-93A characteristic E specification.

Winding technique developed by IRC engineers provides winding control that substantially eliminates the effect of the human element thus eliminating possibility of shorted turns or winding strains. All wire used in the construction of precision resistors is subjected to rigid insulation tests of the enamel coating. Particular attention is given to insure transfer of wire to winding form without strain or break in insulation. Many production tests insure high quality in the finished resistor.

The winding is multiple vacuum impregnated with a new compound developed by IRC chemists, which has the unique characteristic of remaining approximately the same consistency throughout the entire range of temperature to which the resistor may be subjected. It is neither glassy hard nor tacky soft under any condition so that wire strains are minimized. This is conducive to a higher degree of stability and freedom from noise. This impregnant also provides a very excellent humidity protection to insure long life under all environmental conditions.

Tolerance—1% is standard. For special tolerance on all types except WW-10J, add to prices shown as follows: Add 10% for ½% tolerance (2 ohms and over); add 15% for ¼% tolerance (5 ohms and over); add 25% for 1/10% tolerance (20 ohms and over). On Type WW-10J, add 10% for ½% tolerance (65 ohms and over); add 15% for ¼% tolerance (200 ohms and over); add 25% for 1/10% tolerance (1500 ohms and over).

Temperature Coefficient—Minimum temperature coefficient of .003% per degree C, from 0°C to 100°C, is standard on all IRC Wire Wound Precision Resistors.

WARD LEONARD

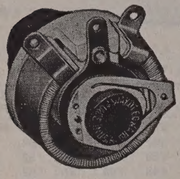
25-Watt — 50-Watt



The Ward Leonard 25-watt (Type 25R) and 50-watt (Type 50R) Type Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance change is essential. Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to assure uniform contact pressure and smooth operation.

Standard shaft length for back-of-board mounting on ¼″ panel.

SELECT THE CONTROL
ADD-A-SHAFT TO MEET YOUR NEEDS

Adashaft Controls are now built in the popular Model "B"—15/16" construction. The basic control unit is constructed with a patented stub shaft . . . usable just this way in many cases as a short, screwdriver slotted unit. A selection of nine basic shaft types are available, ranging from ⅜" to 10" in length, including auto types, insulating nylon and many others. This original, patented Centralab construction permits instant locking . . . resulting in a solid, integral, well aligned unit. There is no price premium on Adashaft . . . you pay for exactly what you need. After adding the required shaft, the units may be converted to switch type with the new "Fastatch"† type KB line switches. All "AB" characteristics same as Model B. Packaged—singly including all data.

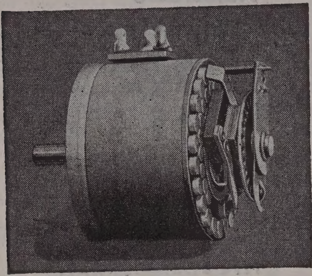
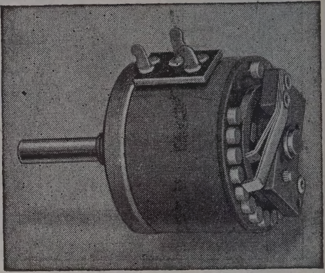
SHALLCROSS AUDIO ATTENUATORS



◄ SHALLCROSS ATTENUATOR NO. 420-2B2



SHALLCROSS ATTENUATOR NO. C720-2A3 ►

These Shallcross Features Mean

✓ **BETTER PERFORMANCE**

✓ **BIGGER VALUE**

- ✓ Off position attenuation well in excess of 100 db.
- ✓ 25% to 50% fewer soldered joints.
- ✓ Noise level ratings that are factual. (130 db or more below zero level).
- ✓ Non-inductive Shallcross precision resistors used throughout assure flat attenuation to and beyond 30 kc.
- ✓ Types and sizes engineered for all needs. Attenuation accuracies of 1%, resistor accuracies of 0.1%, on special order.

Shallcross Audio Attenuators are available in either variable or fixed units, the former often being referred to as a "control" and the latter, as a "pad".

Controls are available with as few as 5 steps or as many as 52 steps with an attenuation as small as 0.1 db per step. The total attenuation for a single control does not exceed about 125 db since such high attenuation approaches the noise level of the switching mechanism.

The complete story of Shallcross attenuators may be found in Shallcross Engineering Bulletin #4, copies of which are available on request. Specifications and prices are given below for a few of the most popular variable attenuators.

IMPEDANCE: 150, 500, 250/500, 600 ohms, except potentiometers, which are 100,000 and 250,000 ohms.

RESISTORS: All non-inductively wirewound, ±5% tolerance, except types preceded with "C", which are composition selected to ±5%.

ATTENUATION: Increases for counter-clockwise rotation of knob end of shaft.

FREQUENCY RESPONSE: Flat over entire audio range.

SWITCH MECHANISM: Multi-leaf wiper arms, collector rings and contacts available in tarnish resistant silver alloy or brass. Noise level −130 db.

DETENT: Indexing mechanism available on any unit for $0.75 list. Back of panel depth is then increased 5/16″.

TYPES BX183A AND BX193—±1% IN COMMON VALUES—IN STOCK

In addition to the popular standard types listed here, Shallcross Akra-Ohm Resistors are made in a complete line of standard and special designs for precise electronic equipment demanding great stability and long life even under difficult conditions of temperature and humidity.

Shallcross achievements include the development of really practical hermetically-sealed units; BX processed resistors "tropicalized" against moisture and fungus; the use of spun glass insulated wire for applications where considerable power must be dissipated; bifilar wound resistors, 1000 ohms or less, for exacting instrument use; heavy-duty surge resistors; accurate heavy-duty power resistors, and various others. Write for Shallcross resistor bulletin R3-B for complete information.

SHALLCROSS AKRA-OHM PRECISION RESISTORS

for "Miniaturization" applications

UNUSUAL ACCURACY IN SMALL SPACE

These new Shallcross Akra-Ohm Wire-Wound Precision Resistors have been designed to meet the needs of modern, miniature equipment. Standard tolerance is 1%. Closer tolerances can be furnished on special order.

The units offer unusually high and accurate resistance values in small space and are light enough to be suspended by their own tinned copper leads, or may be secured with mounting screw.

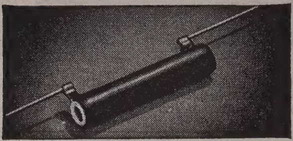
Popular OHMITE "BROWN DEVIL" RESISTORS



High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads.

The all-welded construction of the 5 watt unit makes it possible to extend the resistance range to 10,000 ohms, an unusually high value for a vitreous enameled stock unit.

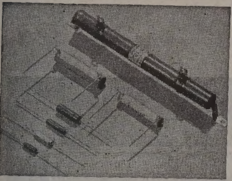
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator—popular the world over with servicemen, engineers and students—now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

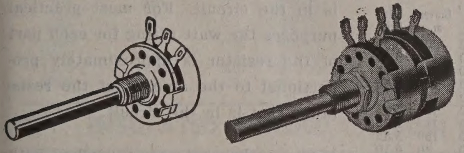
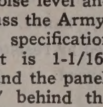
2 WATT MOLDED COMPOSITION POTENTIOMETER—TYPE AB





The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The single unit is 1-1/16" diameter and extends 9/16" behind the panel. The dual unit extends 1-3/16" behind the panel. The 2" long round shaft (including the ⅜" long mounting bushing) is available from stock on potentiometers with all three resistance tapers and on the dual unit. The screwdriver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

WATT RATINGS

Nominal Watt ratings for Slideohm Resistors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approximately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Slideohm Resistors.

Price of resistor includes brackets and one adjustable band.

ADJUSTABLE BANDS

One screw-driver type adjustable band terminal is supplied with each "Slideohm" resistor. Order additional bands, screw-driver or knob type as illustrated by resistor type number for which band is to be used.

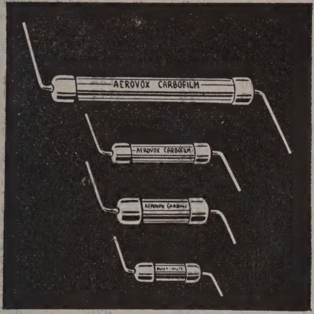
AEROVOX *Carbofilm* RESISTORS



PRECISION RESISTORS MADE WITH MATCHLESS ACCURACY

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments. All in all, Carbofilm resistors meet the requirements of accuracy, stability and economy.

The Carbofilm resistors are a carbon deposit type and are available in the following standard or jobber stock sizes with the resistance value shown in the listing.

Packed and sealed in plastic tubes for your protection.

- Meet JAN-R-11 Specifications
- Low Noise Level
- Small Size
- Insulated

Continental's "Carbomite" type M resistors meet all the requirements for a fixed, stable and rugged resistor. The insulated bakelite shell has a 1000 volt breakdown test and will not short out when stacked together. Instant solderability with a touch of a soldering iron is another of the features of this resistor. They are packaged in boxes of 10 and 50 in the ½ watt and 1 watt sizes and 10 and 25 in the 2 watt size. Standard RTMA Color Coding is marked on each unit. Both 5% and 10% tolerance resistance values are carried in stock.

Continental's type WM resistors are wound evenly to prevent shorting of turns. A minimum of .0015 inch wire is used for the winding. The terminals are securely and permanently connected to the winding. They are resistance to moisture. The WM resistor is recommended for circuits requiring very low resistance which is not ordinarily available in the carbon style. Packaged in boxes of 10 or 50 each.

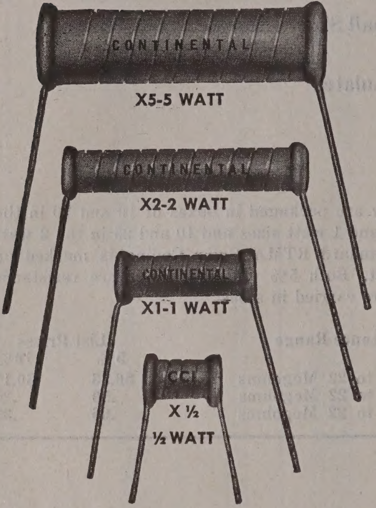
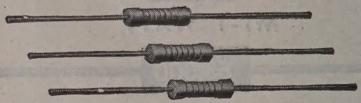
Trade Mark Reg.

X & PX TYPE



NF TYPE



NF—Continental "Nobleloy" type NF metal film resistors are small in size, with axial leads and are designed to meet government specification MIL-R-10509. Initial accuracy and long time stability make these resistors ideally suited for critical applications. RTMA color coded to standard values.

X — Continental "Nobleloy" type X metal film resistors have radial leads soldered to the body for a rugged construction. The hollow centers allow for greater heat radiation thus enabling these resistors to withstand overloads. The resistance and tolerance are marked on the body of the unit. Coated with gray rubberized enamel.

PX—Continental "Nobleloy" type PX metal film resistors are constructed the same as type X. A different improved alloy resistance film is employed to allow for better temperature coefficient. The resistance and tolerance are marked on each unit. Coated with an orange colored enamel for identification.

SUPPRESSORS SUPPRESSORS

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor—yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

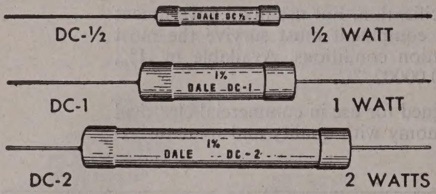
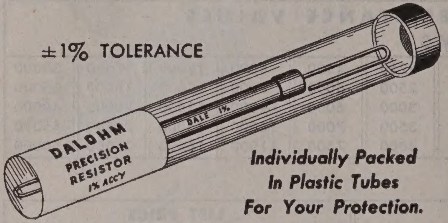
DALOHM DEPOSITED CARBON RESISTORS



±1% TOLERANCE



Individually Packed In Plastic Tubes For Your Protection.

FOR EXCEPTIONAL ACCURACY IN ANY LOW-HIGH RESISTANCE RANGE

Dalohm deposited carbon resistors are manufactured under a licensed agreement with Western Electric. The matchless stability and accuracy of these precision resistors are the result of years of intensive research and development. Dalohm deposited carbon resistors are manufactured by depositing pure carbon in crystalline form which is bonded to a selected ceramic core. They are intended for circuits calling for the accuracy and stability of wire wound resistors such as instrumentation, advanced electronics and critical television circuits but with the marked economy of carbon resistors.

Dalohm deposited carbon resistors are sealed from moisture by special silicone coating material having a high dielectric strength, excellent thermal conductivity, and offer high resistance to abrasion.

DALE Engineers and chemists have compounded a chemically inert material making possible these light weight, hermetically sealed precision resistors that surpass the requirements of JAN-R-93A and MIL-R-93A.

In addition to these resistors being completely impervious to the penetrating effects of salt ions, humidity, moisture and corrosive gases and vapors, this new material in which the Dalohm precision wire wound resistors are incased has very high dielectric strength and due to its coefficient of expansion being very close to that of the wire itself it eliminates the possibility of distorted windings and shorted turns which are quite common in other types of resistors.

The superior quality of Dalohm precision wire wound resistors is assured through thorough testing, temperature cycling, salt water immersion, humidity and overload tests. These are without a doubt the precision resistors for dependable and long life operation under the most adverse conditions.

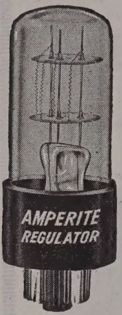
AUTOMATIC **AMPERITE** REGULATOR

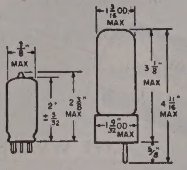
BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE



T9 BULB

AUTOMATIC REGULATION

WHAT IT IS! *AMPERITE* is an automatic "rheostat" designed to keep the current in a circuit at a definite value, e.g., 0.5 amps. Should the supply voltage increase, the *AMPERITE* will automatically increase in resistance to take up the increase in supply voltage. Since *AMPERITE* is a constant current device, it can only be used on a fixed load.

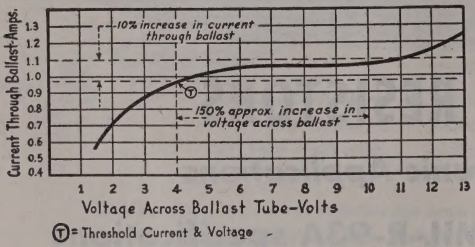


SIZES:

T-5½ L, Miniature. O.D. $\frac{11}{16}''$; seated height, 2⅜″.

T-6½ L, Miniature. O.D. $\frac{13}{16}''$; seated height, 2⅜″.

T-9, Octal base. O.D. $1\frac{5}{16}''$; seated height, 3″.



CHARACTERISTIC CURVE

Characteristic curve of a typical Amperite. Approximate curve of any other Amperite can be obtained by multiplying or dividing the current or voltage scale by any number.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current—voltage threshold value:

AMPERITE NUMBER	3-4	3H4	10-7	12-11	12H11
THRESHOLD CURRENT	0.3	0.35	1.0	1.2	1.25

ADVANTAGES

Light . . . Compact . . . No Moving Parts (Will withstand vibrations of 10G min.) . . . Hermetically Sealed (Not affected by altitude or humidity changes) . . . Can Be Changed as Easily as a Radio Tube . . . Operates Equally Well on AC or DC . . . Inexpensive.

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation per **AMPERITE** 50w per tube (ST19 bulb). Any number of **AMPERITES** with the same voltage range can be operated in parallel. **AMPERITES** should not be used in series.

AMBIENT EFFECTS

Variations of —50° to +70° C. will change the current of an **AMPERITE** approximately ±2% on the regulating portion of the curve.

LIFE EXPECTANCY

Average life 2000 hours prox.; if **AMPERITE** filament is operated at black temperature—average life 5000 hours prox., depending on use.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable **AMPERITE**.

Power Supply	**Dry Cells**	**6 Volts**	**12 Volts**	**26 Volts**	**115-Volts**
Supply Variation	2.2-3.0V	5.5-7.5V	10.0-14.0V	22.0-30.0V	105-125V
Desired on load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	17.5-18.5V	90- 95V
Required on **AMPERITE**	0.4-1.0V	1.6-3.4V	3.9- 7.6V	4.5-11.5V	15- 30V
Current Variation	.29-.32a	.29-.31a	.29-.31a	.29-.32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain 2% regulation on load. Better regulation is obtainable by increasing the voltage across the **AMPERITE**. In general, the higher the percent of the supply voltage taken by the **AMPERITE**, the better the regulation.

ACTUAL SIZE

Belden engineers have developed a UHF 300-ohm Transmission Line Cable for TV installation. This 300-ohm cable has the following qualifications:

A cable that can be handled easily without destroying the electrical characteristics.

A cable that can be stripped down to the bare wire in seconds.

A cable that can be twisted, without distortion, to get the proper line balance.

And a cable that can withstand rain and snow—no wet-loss.

In addition, Belden Ultra-Weldohm No. 8235 Resists Wind—has more flexibility; Resists Breakage—has longer wire life; Resists Oxidation—has copper-sheathed, 20-gauge, stranded steel wire; Resists Sun—made with 100% virgin polyethylene web.

Specify Belden Ultra-Weldohm Cable, and get a better picture, too!

SPECIAL PURPOSE INSULATED WIRE

THE WILLIAM BRAND AND CO., INC., WILLIMANTIC, CONN.

MINIATURIZATION WIRE

Specially developed for use in electronic equipment within the range of −55°C to +105°C, and maximum operating voltage of 600 volts rms. This wire is ideal for use in miniaturized equipment as both hook-up wire and lead wire for transformers, chokes and other components, where space is at a premium and operating temperatures are high. Available in both standard and flexible . . . in solid colors or candy striped with 1, 2 or 3 tracers.

The primary insulation is Turbo 540, an extruded polyvinyl chloride compound that is resistant to the effects of water, oils, aircraft engine fuels, hydraulic fluids, ethylene glycol, alcohol, dilute acids, alkalies and fungus. Over the primary insulation there is an extruded jacket of nylon to give added mechanical protection and abrasion resistance.

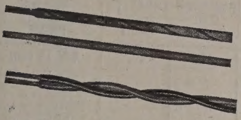
Rome Synthinol . . . . A ROME CABLE PRODUCT

THERMOPLASTIC INSULATED HOOK-UP WIRE



U/L Voltage Rating—300 Volts Max.
Single and Two-Conductor Twisted Cable:
Color Coded

Rome Synthinol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalies, moisture and flame, and possessing unusually high dielectric strength. Colors are of gem-like permanency.

Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthinol.

Rome Synthinol is specially designed for the chassis and sub-chassis wiring of radio and television receivers and transmitters as well as all other types of electronic equipment. It has physical and electrical characteristics of unusual permanency.

SPECIFICATIONS

Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.

In order to provide maximum flexibility and prevent unraveling of the strands, a short lay stranding is used as follows:

No. 22 Awg. .33 inch max. No. 20 Awg. .50 inch max.

Insulation: Rome Synthinol—Approved by and conforming to Underwriters' requirements and the performance specifications of A.S.T.M. D 734. Available in solid colors or with a surface applied contrasting colored spiral stripe.

Typical Test Results

RESISTANCE LINE CORDS for AC-DC Radio Sets

The cords have a wide market for replacement on AC-DC radios with worn out cords; also on those formerly having hot resistance. Consists of a 6 foot cord with red and black rubber covered line cord wires and an asbestos covered resistance having separate terminal braid. Consolidated cords have an exclusive tinned copper terminal on the resistance cord that can be soldered. Colored cotton tracer designates ohmage.

VOLTAGE DATA

The table and example below indicate tube voltages and how to determine proper cord. Check the voltages of each tube in the voltage table. Add all voltages together, allowing 10% variation, plus or minus.

TUBE VOLTAGES

6.3 volt tubes: 36, 37, 38, 39, 77, 78, 6B7, KR1, 6D6, 6C6, 6A7, 6F7.

12 volt tubes: 12Z3, 12A5.

25 volt tubes: 25Z5, 43.

EXAMPLE:
Radio Contains

1 77 tube—voltage	6.3
1 78 tube—voltage	6.3
1 43 tube—voltage	25.
1 25Z5 tube—voltage	25.
Total voltage	62.6

Radio uses 160 ohm cord.

t-v lead-in cables

Cornish TV Lead-in Cables are furnished only in pure virgin polyethylene insulation to insure long life under severe operating conditions and are designed so that only exceptionally low losses at high frequencies are experienced. They are available with pure copper or copperweld conductors. Copperweld 300 Ohm lead-in cable has 1½ times the tensile strength of copper and has approximately 2½ times greater flexing life. It insures long service life in TV aerial installations requiring long runs.

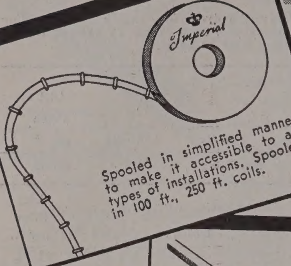
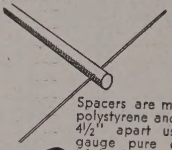
Here is the Answer... Imperial's 250-275 open line tested and proved under all UHF operating conditions*

UHF



Spooled in simplified manner to make it accessible to all types of installations. Spooled in 100 ft., 250 ft. coils.

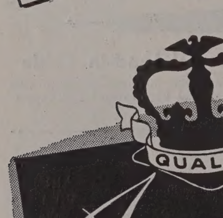
UHF



Spacers are made of pure polystyrene and are spaced 4½" apart using a #20 gauge pure copper with triple formvar coating to prevent shorting of signal.

UHF

Outperforms all other types of wire in both local and fringe areas. Matches the input of all sets tested.

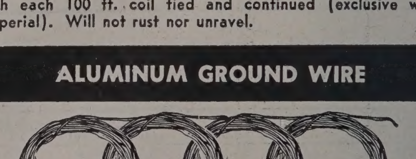


Imperial Radar and Wire Corp., largest manufacturers of Hi-Gain, Lo-Loss products ***introduces a new transmission line*** specifically designed for ***U. H. F.*** This carefully tested ***250-275 ohm*** open lead wire is manufactured of ***pure copper*** and features a heavy ***triple coating*** of ***formvar*** which prevents corrosion, shorting out of signal or breakage due to climatic conditions (in most cases). Easy to install. The wire, ***designed*** and ***manufactured*** especially by Imperial, has a maximum stretch of only 15%.

Studies of the product by our engineers in a variety of test areas, including parts of the country with the highest percentage of salt air, show four times more gain than standard wire for both UHF and VHF on all bands. Note that the insulators on this transmission line are spaced for efficient performance on both UHF and VHF.

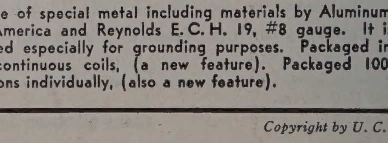
****Tests made in many areas including the Portland, Oregon territory.***

NOW... Imperial QUALITY GUY WIRE



Manufactured in **100 ft. continuous coils.** Made of **6 strands** of prime **galvanized** basic wire with a high coat finished, soft **easy** to work with, packaged in 1000 ft. cartons with each 100 ft. coil tied and continued (exclusive with Imperial). Will not rust nor unravel.

ALUMINUM GROUND WIRE



Made of special metal including materials by Aluminum Co. of America and Reynolds E. C. H. 19, #8 gauge. It is designed especially for grounding purposes. Packaged in 100 ft. continuous coils, (a new feature). Packaged 1000 ft. cartons individually, (also a new feature).

ANACONDA UHF CABLE

Developed and designed in cooperation with the UHF Engineers of one of the largest producers of UHF equipment in the country. Unique inner construction of jacket allows polyethylene tubes to literally float in air. Polyethylene thread centers high strength copperweld conductors assuring constant spacing at all times. This cable has been tested in pioneer ultra high frequency areas and has been found equally reliable over the entire range of VHF and UHF channels with lowest losses under adverse weather conditions. Characteristic impedance is 270 ohms. Attenuation in D/B is 3.6 at 500 MC and 4.8 D/B at 900 M/C. Both figures are per hundred feet. For best results sealing kit and insulator described below should be used in all installations. Size of cable is approximately ½" x ⅜".

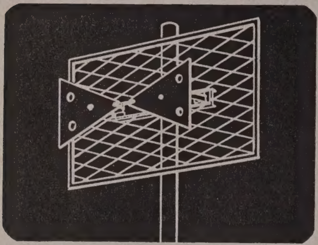
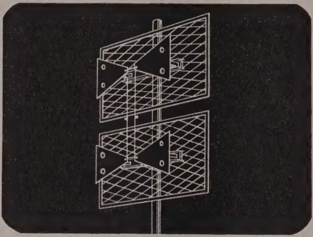
UHF ANTENNA SYSTEMS by VEE-D-X

VEE-D-X BR-U BOW TIE AND SCREEN REFLECTOR





MODEL BT-U

STACKING HARNESS BTH-U

Here is the finest, easiest to install Bow Tie ever made, yet costs no more than ordinary Bow Tie antennas. It is precision built and engineered for the performance-proven power for which VEE-D-X is so famous. No expense has been spared to meet the most rigid mechanical requirements so essential to good UHF reception. Look at the features . . . compare—and you will agree that here is the Aristocrat of bow ties.

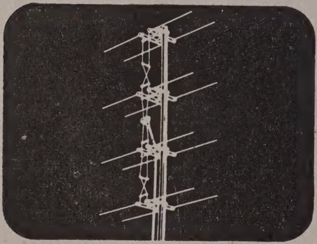
EASIEST TO INSTALL

Thanks to the VEE-D-X exclusive FLEX-CLAMP, it is amazingly fast and easy to mount the BT-U, especially when adding to existing installations at rooftop. No fumbling or fussing with U-Bolts—just one screw to tighten and FLEX-CLAMP holds the antenna with a vise-like grip. FLEX-CLAMP also facilitates probing—just loosen the screw and move the antenna up or down or around the mast.

FEATURES OF THE VEE-D-X BT-U

- 8 db gain across the entire UHF band. 50% additional gain on stacked arrays.
- Grounded driven element especially engineered to eliminate noise pick-up—no fragile insulators.
- Engineered for super sharp picture reception from 470 to 890 mcs.
- Four easy steps to assemble —takes less than a minute.
- All zinc-plated, weather resistant steel construction. Reinforced screen reflector.
- Rugged construction and exclusive FLEX-CLAMP holds antenna rigid. Greatly reduces antenna movement in wind—the cause of picture flicker.
- Compact packaging — only 12″ by 20″ by 1½″ deep.

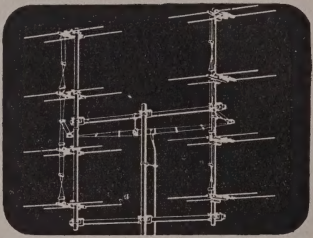
THE VEE-D-X UHF COLINEAR



COLINEAR ALL-CHANNEL FRINGE

Engineered and developed principally for use in fringe areas where gain is the number one consideration. Each of the four bays of the Colinear consist of a full wave, radiator and reflector. The critical adjustments of harness spacing are designed for optimum gain at the desired channel. The Colinear's rugged four-bay construction of solid aluminum elements with Fiberglas cross-arms assures long life.

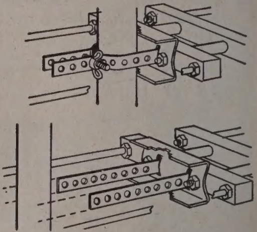
Model CA-U..List **$11.10**



SIDE-BY-SIDE STACKED COLINEAR

The VEE-D-X stacked Colinear has been described by a leading TV receiver manufacturer as "The most powerful antenna developed for UHF reception." The two Colinears may be stacked by using the VEE-D-X Stacking Kit, Model CA-U-SSH, which consists of two masts, two booms and a stacking harness. The additional gain assures powerful, long distance reception.

Model CA-U-SSH.................................List **$13.20**



Exclusive New Colinear MAST CLAMP

Simplifies — Speeds Installation

The diagrams above show the new improved mast clamps on each bay of the Colinear. This method eliminates sliding U-Bolts over the mast—a feature welcome to installation men when installing on present VHF mast at rooftop. This new clamp is faster, easier to install—facilitates moving the bays up or down when probing. A single screw tightens the clamp with a vise-like grip.

ULTRA Q-TEE FOR PRIMARY AREAS

The Ultra Q-Tee provides brilliant performance on all VHF and UHF (2-83) channels. It has solved one of TV's biggest problems by combining both VHF and UHF into a single antenna employing a *single transmission line.* It thereby replaces the need for two or more antennas and additional transmission line and switches. The Ultra Q-Tee employs eight unique, patented* printed circuit band reject filters that isolate the VHF and UHF portions of the antenna. Its ease of installation is due to VEE-D-X ruggedized pre-assembled construction. Can be stacked for additional gain.

the amazing new
VEE-D-X
ANTENNA ROTATOR

The rotator that obsoletes all others. Precise as a watch — rugged as a bulldozer — streamlined as a rocket

The VEE-D-X Antenna Rotator is a remarkable engineering triumph in design, construction and performance. It was developed to perfection in cooperation with world famous small gear specialists. Fast and easy installation results from its in-line construction. It is the only rotator that requires no meter adjustment to compensate for voltage drop resulting from varying lengths of lead lines. It utilizes a standard four-wire connecting lead. Positive antenna stop means no over-travel and assures pin-point accuracy.

OTHER OUTSTANDING FEATURES

STREAMLINED CASE DESIGN AND BALANCED MOUNTING give far better appearance, less wind resistance, relieve strain on mast and guy wires. No cumbersome offset—improved rooftop appearance.

THREE JAW CHUCK-TYPE MAST CLAMP at top and bottom is an exclusive VEE-D-X feature providing largest clamping surface of any rotator. Easily secured with a screwdriver.

PRECISION CAST GEARING provides dependable performance under all conditions. No backlash due to wear. Reduces objectionable noise. One look at the gearing and you can see why this is the finest of all rotators.

FAST, EASY LINE CONNECTIONS accommodate 4 wire line. Exclusive snap-in cover slides into place—no screws to drop.

POSITIVE MAST ALIGNMENT with built-in self-centering mast guides.

EXTREMELY POWERFUL. Will support a load of over 200 pounds—thereby eliminating any need for an auxiliary thrust bearing. Motor bearings are silicone lubricated for long life.

MAGNIFICENT DECORATOR STYLED CONTROL CONSOLE

Smaller, more compact than any other. Streamline design gives low center of gravity—cannot tip. Unique control circuit with linearly graduated dial permits uniformed scale deflection normally available in DC instruments only. Graduations are equidistant throughout scale giving both geographic and numerical reference points. Dial scale is protected with glass window to avoid electrostatic charging. Made of flame-proof Celanese Lumarith plastic in heather green or cordovan mahogany.

THE RCA REVERSIBLE-BEAM TV ANTENNA ARRAY
For Locations with Co-channel Interference

The RCA-212A1 Reversible-Beam TV Antenna Array receives signals from only one direction at a time; eliminates co-channel interference where stations are approximately 180° apart. It also eliminates adjacent-channel interference where the receiver lacks selectivity. RCA-developed "V" attachments provide uniform directional characteristics for all twelve channels. A high overall front-to-back ratio is achieved through the use of driven elements, instead of parasitic elements. This design also makes possible the unique feature of lobe switching.

Sturdily built throughout of high-quality aluminum, the RCA Reversible-Beam Antenna consists of an array of four eight-foot dipoles in the form of a square. A dual transmission line connects the horizontal and vertical dipoles to an attractively packaged diplexing network located at the rear of the receiver. By the mere flick of a switch on the diplexer, antenna directivity can be reversed.

BRACH MUL-TEL MASTER TV-FM ANTENNA SYSTEM

The Mul-Tel System is designed to operate 2 to 16 Television Sets from one common TV Antenna . . . The system discriminates against I.F. interference as it will pass only those frequencies in the TV band from 50-230 megacycles . . . The range of application for the Brach Mul-Tel System is virtually limitless . . . It is ideal for garden type apartment houses or other multiple dwellings, and for extra television outlets in the home . . . It is eminently suitable for multi-room restaurants, taverns and clubs which operate several TV sets on the premises . . . In suburban areas, it supplies the simplest and most satisfactory method of TV distribution for smaller dwellings and two-family houses.

Brach Mul-Tel provides the dealer with the outstanding advantage of being able to demonstrate up to sixteen TV sets simultaneously from one roof antenna, with uniform signal to each receiver.

TRANSFORMER (No. 72-300A) is designed to be a perfect termination at Channels 2-13. It also has a high pass filter action and may be used in interference areas to reduce diathermy and other I.F. interference. A coaxial fitting is provided with transformer #72-300A to make a low loss connection to RG59/U. It has negligible loss over the complete TV band and a voltage gain of 2:1. Recommended for all coaxial line installations with individual antennas in noisy and heavy interference areas and as a TV Set Matching Transformer in conjunction with the Brach Mul-Tel System.

List Price $3.45

2-SET COUPLER INPUT (No. 300-300) receives its signal from one antenna which may use 75 or 300 Ohm Down-Lead. The signals are filtered of I. F. interference and divided into two outputs which may, by proper connection, be circuited to either 75 or 300 Ohm TV receivers. More than 20 d. b. of isolation in regard to loading effects. A defective connection to either receiver will not affect the operation of the other receiver connected to the 2-Set Coupler. This unit functions on the "Berger Effect" principle as do all other Mul-Tel Units.

TRIO MANUFACTURING CO.

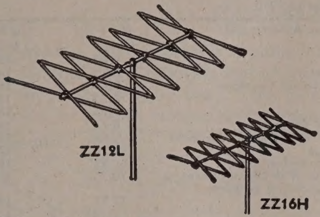
TRIO ZIG-ZAG TV ANTENNAS

Higher Gain Than Any Yagi!
All Channels VHF Performance!

Here's the TV antenna that is setting the standards for the industry! This sensational new design results in sharper directivity and higher front-to-back ratio. It provides snow-free pictures and fade-free sound in even the most remote fringe areas.

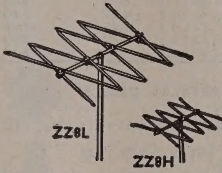


MODEL ZZ12L—For extreme fringe reception. Narrow forward lobe and a high front-to-back ratio for extreme fringe area reception. This pattern—in most areas—effectively solves the problem of co-channel interference, since it is highly directive. The antenna consists of 12 half-wave elements, all directly connected to the feed line at one point. The ZZ12L provides the ultimate in gain and directivity on the low channels, 2-6.

MODEL ZZ16H—Also for extreme fringe reception, covering all high channels 7 thru 13. Has narrowest forward lobe and highest front-to-back ratio, also effectively overcomes co-channel interference. This antenna has 16 half-wave elements all directly connected to the feed line at one point and provides saleable TV reception in areas where it had previously been considered impossible.

The ZZ12L and ZZ16H may be stacked for fine all VHF channel reception in even the most remote fringe areas.

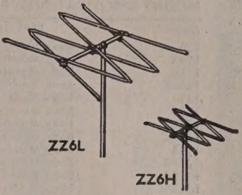
MODEL ZZ8L — For normal fringe area reception, providing more than adequate gain on channels 2 thru 6. Radiation pattern is comparable to a well designed multiple element single channel yagi. Has 8 half-wave elements all directly connected to feed line at one point.



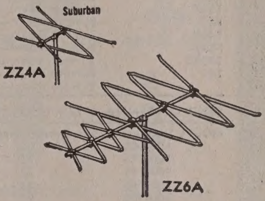
MODEL ZZ8H—Has same advantages and features as the ZZ8L but covers channels 7 thru 13.

Antennas are shipped with all hardware mounted on the boom with the exception of the mast clamp. Complete assembly is only a matter of minutes. To provide added strength, TRIO ZIG-ZAG TV ANTENNAS now have stamped steel element clamps.

MODELS ZZ6L and ZZ6H—These models consist of 6 half-wave elements — have a pattern and gain comparable to a cut-to-channel yagi. They are recommended for near fringe installations. Model ZZ6L covers channels 2 thru 6; Model ZZ6H, channels 7 thru 13.



MODELS ZZ6A and ZZ4A—These antennas offer all-channel reception with a single bay. Model ZZ6A is for near fringe reception. Model ZZ4A is for suburban use. These effectively replace popular all-channel antennas by providing increased gain and greatly increased directivity.

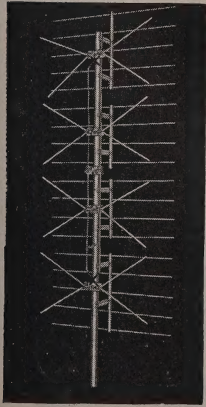


TRIO ROTATOR & DIRECTION INDICATOR

Equally as famous as TRIO TV Antennas is the dependable TRIO Rotator. Tested and proved under every conceivable condition of load, weather, strain and stress. Two husky motors—one for each direction of rotation. Positive electrical stops, positive brake action—no drift. Fully guaranteed for TWO YEARS. Direction indicator is smartly styled, has easy-to-read dial face—finger touch control. A beautiful, dependable instrument throughout—the final product of more than $50,000 in exhaustive research to build the most dependable, trouble-free rotator ever produced!

TRIO BOW-TIE AND YAGI UHF ANTENNAS

HIGH IN QUALITY — LOW IN COST



New TRIO UHF Bow-Tie With Reflector

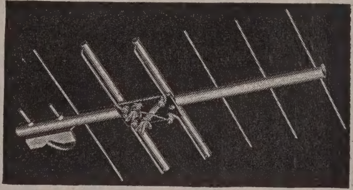
Sturdy, broad-band antennas of uniformly high gain that have been thoroughly field tested. Phasing strips installed, pre-assembled — a jiffy to attach reflector screen. Available in one, two and four bay models. Usual high-quality TRIO construction.

MODEL UBT-1—Supplied with 2 ft. mast. Single bow-tie with reflector.

MODEL UBT-2—Supplied with 3 ft. mast. Two stacked bow-ties with reflectors.

MODEL UBT-4 (Illustrated) — Supplied with 4 ft. mast. Four stacked bow-ties with reflectors.

New TRIO UHF Multi-Channel Yagi Antennas



Broad-band yagis developed by TRIO now successfully applied to UHF. Four models cover all UHF channels, rarely more than two needed for any one area.

These high gain six element yagis have sharper directivity, thereby eliminating ghosts. Thoroughly field tested. Entire antenna mounted in front of mast removes metal from field of reflectors or antenna elements. Mast clamp supplied.

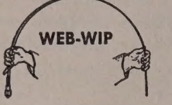
COMMERCIAL-TYPE WEB-WIPS



Commercial-type, high quality whips with extreme flexibility yet will not fatigue or take permanent set under extreme flexure. Bonded-on fiber glass covering . . . insulated . . . weather-proof. Standard lengths are listed but these whips can be provided in any practical length on special order.

STANDARD LENGTHS—60", 72", 78", 90", 96". Suggested resale price............$12.00

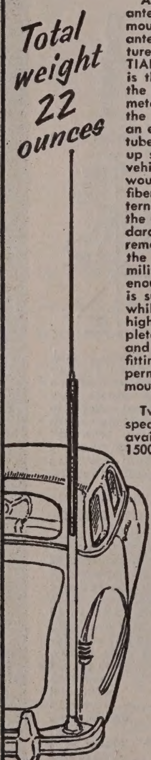
WEB-WIP CENTER LOADED ANTENNA



A new and highly effective center-loaded antenna designed specifically for vehicular mounting or for small boats or aircraft. This antenna incorporates numerous mechnical features found only in the well-known WEB-TIARE marine antenna. Notable in this regard is the overall weather-proof construction and the thorough and complete protection of all metallic parts. The lower support column of the WEB-WIP center-loaded mobile antenna is an extremely sturdy but lightweight fiber glass tube. This column permits ample flexure to take up shock but prevents excessive sway at high vehicle speeds. The center loading section is wound directly on the upper portion of the fiber glass column and is protected by an external plastic covering. The top whip secures to the upper end of the loading section by a standard screw thread fitting and may be readily removed. This top whip incorporates many of the design features of the WEB high-quality, military and commercial whips. It is flexible enough to bend into a complete half circle yet is sufficiently rigid to prevent excessive sway while the vehicle is in motion. A bonded-on highly flexible fiber glass jacket provides complete protection against weather. Both whip and support column have Chrome plated brass fittings and the standard 3/8 thread utilized permits mounting on any standard type of base mount or with WEB special fiberglass mount.

Two amateur band models are listed though special antennas of this same general type are available for operation on any frequency from 1500 to 30,000 kcs. Prices on request.

(75 meter phone band)
(40 meter phone band)

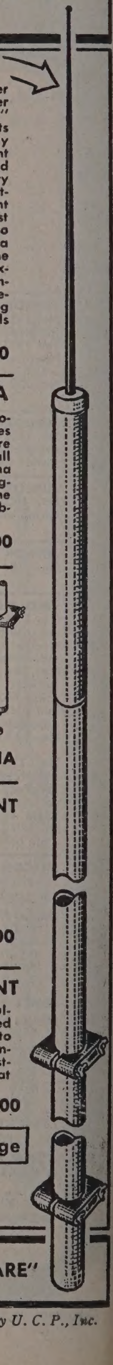
WEBSTER-"TIARE" ANTENNA



A center-loaded antenna for use in marine or other fixed or mobile services where a full length quarter wave vertical antenna is not feasible. The "Tiare" is time-tried-and-proven with thousands of units giving outstanding performance on boats of many different types. The antenna has an overall height of 24 feet and the construction throughout will stand up under motion of the craft as well as heavy weather. The antenna is completely waterproof! Bottom support column is heavy-wall, water resistant aircraft aluminum, anodized and sealed with a most durable plastic coating. Upper loading section is also completely sealed and is watertight. Top whip has a highly flexible, bonded-on fiber glass covering and the whip design is such that it can be subjected to extreme flexure without fatigue or permanent set. Antenna comes with rugged, insulating mounts of die-cast, high impact bakelite. Holding bolts and wing nuts are bronze. Marine model covers 2-3 mcs. Models in other ranges are available on special order.

Suggested resale price (FOB)............$54.50

JUNIOR "TIARE" MARINE ANTENNA

The WEBSTER-TIARE Junior Model Antenna incorporates the same principles as the Standard and gives the same unequalled performance. Its features are the same with two exceptions: the tube base and all hardware are Chrome plated brass and the antenna telescopes to a fraction of its extended height. Ruggedly built for extra long life in rugged marine service. Price includes standard mounts but all Webster special mounts can also be used.

Suggested resale price (FOB)............$60.00

The wide variety of finishes includes: Cherry Mahogany, Cordovan Mahogany, Blonde Mahogany, Grey Mahogany, Walnut, Platinum Walnut, Limed Oak, African Oak, Ebony, Maple, Fruit-wood, Natural Birch and Knotty Pine.

High Fidelity demands a "care-constructed" cabinet that will not permit the slightest vibration to interfere with radio's new miracle of faithful tone reproduction.

Speaker enclosures are of two types—conventionally shaped cabinets and those designed to fit into room corners and to save space. Conventional cabinets are bass reflex or horn loaded with C. G. McProud engineered *Flex-O-Port* which is adjustable to match any speaker; corner cabinets are horn loaded, and are also available for two-way systems.

Acoustically perfect grill fabric is used on all loudspeaker enclosures which are lined with approved sound absorbing material to minimize internal sound reflections. Television cabinets are available with pull-out phonograph drawers. Models will accommodate most chassis and tube sizes up to 27 inches.

Installing equipment in these cabinets is quick and simple—only a screw-driver is needed. All cabinets can be shipped with instrument panels pre-cut for easy installation of equipment.

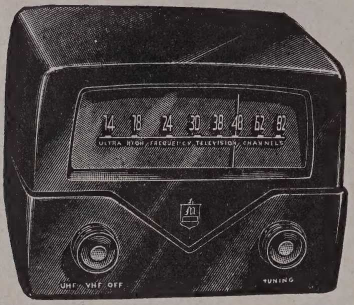
UHF CONVERTER AND UHF TUNER

P.R. MALLORY & CO. Inc.
MALLORY

P. R. MALLORY & CO., INC. · INDIANAPOLIS

MALLORY TV-101 UHF CONVERTER*



The Mallory TV-101 UHF Converter expands the receiving capability of any conventional VHF television set to include reception of all UHF stations located within the signal range.

Designed for continuous tuning, this UHF converter insures a compatible balance of inductance and capacitance over the entire, tuning spectrum from 470 to 890 megacycles with a single control.

The smooth and easy operation of the TV-101 Converter is the result of many years of Mallory research in the field of variable inductance tuning devices. This program has resulted in the successful combination of modern circuit techniques required for converting conventional UHF signals to intermediate channels. The TV-101 will result in added television entertainment, through wider program selection, from the conventional television receiver.

The TV-101 Converter is equipped with a built-in UHF antenna which permits installation without the need for special tools or technical skills.

To simplify the operation of this unit even further, a 3-position, "master control" switch is located on the panel to assure rapid selection of:

(a) UHF station tuning.
(b) Normal operation of the VHF set.
(c) Switching VHF set and converter off and on.

Complete installation and operating instructions and warranty are included with each unit.

Catalog No. **TV-101** List Price **$42.50**

DETAILED SPECIFICATIONS

Tuning Range: The tuning range of the TV-101 extends from 470 to 890 megacycles in a continuous, unbroken sweep of the tuning dial. This permits accurate tuning of all UHF TV channels without the addition of strips, coils, or band switches. The Mallory Converter is constantly tuned for operation in all areas of television reception.

Tube Complement: 6AF4/6T4 Oscillator; 6CB6 I.F. Amplifier; Selenium Rectifier; and a 1N72 UHF Diode Detector.

Circuitry: Three tuned circuits are employed in the UHF range to provide antenna pre-selection as well as the oscillator-mixer tuning function. These circuits are controlled manually by means of a single shaft actuated from the front panel of the converter. A 6CB6 amplifier, operating at a mean of 82 megacycles, is part of the TV-101. It provides additional amplification at the converter I.F. (either VHF channel 5 or 6). A combination change-over and AC on-off switch is provided to permit quick selection of either VHF or UHF stations from the front panel of the instrument.

Antenna Input Impedance: 300 ohms nominal. Either balanced or unbalanced line may be used.

Output Impedance: 300 ohms.

Stability: Oscillator drift and instability in the TV-101 are reduced to a negligible factor by the omission of all mechanically unstable parts, such as; air-tuned condensers, long leads, switches, and coil strips. Thermal sensitive parts are mounted away from heat producing components such as the I.F. and power supply tubes. The TV-101 stabilizes after approximately 1 minute when used with inter-carrier VHF TV sets, and after 3 to 5 minutes when employed with split-circuit sets.

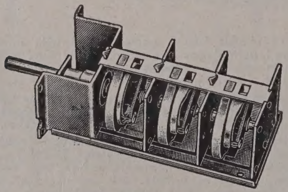
Dial Mechanism: The dial is a slide-rule type, calibrated linearly in TV channels 14 through 82. Full coverage of the entire tuning range is accomplished with approximately 9.75 turns of the tuning knob. Numerals indicating calibration are in gold on glass, and extend approximately 4¾″ across the face of the instrument.

Power Supply: The TV-101 is designed for 117 volt, 60 cycle operation. The power supply consists of a transformer, a selenium rectifier, and a resistance-capacitance filter. Approximately 25 watts of power are required for operation.

Cabinet: Cabinet is attractive molded plastic in modern design. Measures 9″ wide, 6⅞″ deep, and 6¾″ high. Bottom of cabinet has felt pads to prevent marring of furniture.

Weight: Approximately 6½ lbs.

THE MALLORY UHF INDUCTUNER*



The Mallory UHF Inductuner, the result of years of research by P. R. Mallory & Co. Inc. in variable-inductance tuning of resonant circuits, is a compact assembly of variable inductances available in three sections. It will tune continuously the UHF range of television channels from 470 to 890 megacycles when used with proper circuitry.

Features of the UHF Inductuner include: reduction in overall capacitance while maintaining the same compact case as used for the Spiral Tuner; complete shielding between sections; shaping of the various sections for oscillator tracking at an I. F. of 82 Mc.; rugged contacts, and positive, uni-control coverage in 270° of rotation.

Mallory Spiral Inductuner*

The two, three and four gang Spiral Inductuners* are variable inductance tuning devices designed to provide efficient front-end tuning in deluxe television and FM receivers and boosters. When used in conjunction with suitable tubes and a minimum of circuit wiring, these Inductuners assure accurate, noise-free and continuous tuning of the entire frequency spectrum from 52 through 216 megacycles. The Inductuner eliminates the need for band switches, plug-in coils, turret coil assemblies or complicated circuit wiring when used for this purpose.

Tuning is accomplished in all models by means of a single ¼" shaft to vary the inductance of each of the inductors simultaneously from the front of the equipment using the Inductuner. Automatic stops at the maximum and minimum inductance positions are provided to prevent damage to the inductors.

The individual coils have a maximum inductance of .985 uh and a minimum inductance of .025 uh. Total shaft turns are 5.925 +.060-.000. Each Inductuner has a 2½" shaft—¼" diameter.

Model 8302 is ideal for use in a TV booster (see schematic diagram below). Models 8303 or 8304 are suitable for TV front-end service.

Other patents applied for.

Grid Bias Cells

Mallory Grid Bias Cells are small acorn-shaped, self-contained devices. The metal container or cup is the negative electrode. The black disc is the positive electrode.

The principal use of Mallory Grid Bias Cells is in the biasing of the first audio amplifier tube in modern high-gain receivers. The bias cell does not need to be by-passed to ground.

The no-current potential of the cells is within plus or minus 10% of their rated voltage. The cells are strictly potential or voltage cells for biasing class "A" amplifier tubes and should not be used for biasing power tubes or oscillators, or for any circuit where direct current may flow through, or be drawn from, the cells.

The cells may be used at temperatures from 0°F to 140°F. The voltage of the cells remains reasonably constant throughout this wide temperature range. Whenever possible, place the bias cells in the coolest location. The cells exhibit no change in characteristics when exposed to a relative humidity of 90% at 120°F.

Mallory Grid Bias Cells are non-reactive at audio frequencies. The DC resistance of the cell ranges between 10,000 and 40,000 ohms. The cells do not cause noise.

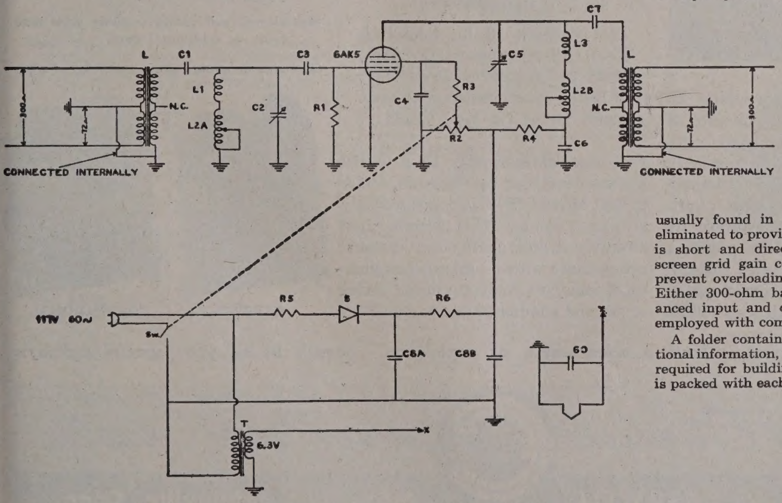
Two-Gang Spiral Inductuner Booster for TV, FM and General Purpose Tuning Continuous Range: 54 to 216 Mc.



At the left is a schematic diagram of a full-coverage, TV booster employing the Mallory No. 8302 2-gang Spiral Inductuner. This TV booster is entirely practical and suitable for home-shop construction by the average technician. The Inductuner supplies all the essentials required for tuning in one, compact, factory-adjusted unit, thus providing simplified construction. No tuning condensers, band switches or plug-in coils are needed. Possible errors usually attendant with hand-wound coils and unknown tolerances of tuning condensers are completely avoided.

The proven efficiency and high gain of a 6AK5 tube has been utilized to the fullest extent. The antenna changeover switch usually found in booster circuits has been eliminated to provide vital R.F. wiring, which is short and direct. An infinitely variable screen grid gain control has been added to prevent overloading by strong, local signals. Either 300-ohm balanced or 72-ohm unbalanced input and output feed lines may be employed with comparable results.

A folder containing detailed and constructional information, plus a listing of components required for building an Inductuner booster, is packed with each No. 8302 Inductuner.

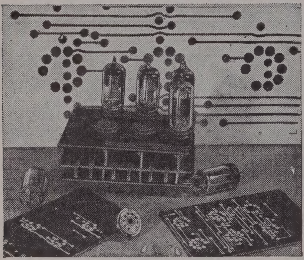
CARDWELL PRINTED CIRCUITS



Simplify your wiring assemblies by using printed circuits. Our method of etching copper clad laminates produces conductor patterns at amazingly *low cost* and in extremely compact form, yet retains *high efficiency*. Variations in inter-wiring capacitance are eliminated entirely by the precision reproducibility of the printed pattern. Line widths and line spacings down to 1/64 inch are possible. Both photo-offset and silk screen processes for forming the pattern are available. The choice depends upon quantities involved, production rate and precise definitions required.

For best performance and low cost, we recommend fiberglas mat-reinforced plastic with the following electrical and physical characteristics:

> Peel strength 10 lb. (one inch strip) moisture absorption 0.52%, (after 24 hrs.) dielectric constant (1 Kc.) 3.62, arc resistance 29 sec. power factor (10 Kc.) 0.55%.

One-shot soldering dip. By a special process developed by Cardwell, solder in well formed fillets is deposited only at desired points. This permits rapid assembly of high quality conventional components with no extraneous pick-up of solder on conductor lines. Saves solder and eliminates shorts.

FEATURES

Cut Labor Costs—Assembly time reduced approximately 30%.

Reduce Weight—Up to 15% less weight.

Less Rejects—Eliminates wiring errors and shorts.

Solve Miniaturization Problems—Requires far less space. Ideal for stacking chassis layers.

Flexible—Circuit changes made with little delay or additional cost.

Eliminates elaborate cabling and tieing of wires

MODEL 3300 UHF-TV CONVERTER

The Ultimate in UHF TV Conversion

Here, incorporated in one precision instrument, are the finest features to be found in any UHF converter available today!

Designed and built by E-V, the Electro-Voice 3300 UHF converter permits reception of ALL UHF Channels on TV receivers not having built-in UHF provisions. It features continuous tuning for "pin-point" reception. Dial is calibrated by channels and tuning knob is weighted for easy, effortless finger-tip tuning provided by a 25 to 1 micrometer drive system.

Either Channel 5 or 6 of the TV set is used as the conversion frequency and 300-ohm line may be used for both the input and output circuits. Installation of the EV 3300 is extremely simple, requiring only the use of a screw driver to make the three connections necessary. The EV 3300 UHF Converter is completely self-contained—there is nothing more to buy.

The EV 3300 UHF Converter incorporates fine features proved by many years experience in building E-V electronic products. New high efficiency, low-loss "silver plated" printed circuits are used in the RF and Oscillator stages for maximum sensitivity and highest stability. Coin silver contacts assure quiet operation and long life.

Tubes used in the E-V 3300 UHF Converter are all high-efficiency, low drain miniature types: 6AF4 rf oscillator, 6BC5 if and 1N72 diode mixer. Unusually thorough internal shielding is built-in to the EV 3300 to minimize radiation interference.

The built-in power supply uses a selenium rectifier for long life and trouble-free service. Power consumption is only 18 watts from the 110V-AC line. Operation is extremely simple. One control knob turns the converter and receiver on and switches from VHF to UHF. Second knob is for tuning dial.

The handsome case, of sturdy metal is attractively finished to perfectly complement all cabinet woods. The added shielding provided by the metal case, further reduces possibility of external radiation. The EV 3300 is engineered inside and out for efficient, stable operation. Only highest quality components are used in this exceptionally small and compact converter. The EV 3300 measures only 5" high, 7⅝" wide, 6½" deep. Shipping wt. 6 lbs.

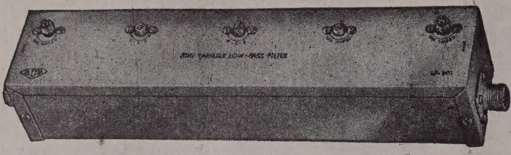
NEW BUD FILTERS TO REDUCE OR ELIMINATE TELEVISION INTERFERENCE

The sources of television interference are most often short wave broadcasting stations, amateur radio transmitting stations, diathermy equipment, X-ray equipment, automotive ignition noises or similar sources. The basic problem of eliminating this interference is that of rejection of the signals received from these sources.

BUD LF-601 LOW PASS FILTER



Interference to television receiver reception caused by transmissions from an amateur station can be caused by harmonics or by shock from the transmitter. The shock from the transmitter fundamental can be cured at the television receiver with a Bud HF-600 high pass filter. Harmonics can be greatly reduced or eliminated at the transmitter by use of a Bud LF-601 low pass filter.

The LF-601 high attenuation low pass filter has the following characteristics:

1. Minimum attenuation of 85 decibels on all frequencies above 54 megacycles and a minimum of 93 decibels above 70 megacycles.
2. Maximum rejection is adjustable from 55 to 90 megacycles. This tunable feature provides two slots at least 100 decibels down.
3. The cut-off frequency is 42 megacycles.
4. The unit will easily handle a full kilowatt modulated on a reasonably flat line.
5. The insertion loss is less than one DB.
6. Since the design of this filter provides an adjustable feature, the unit can be used with either 52 ohm or 72 ohm coax.
7. Each inductance is in an individually shielded compartment.
8. All capacitors used are variable.

LF-601 Dealer Cost **$13.95**

2. Plug the cord from the wave-trap into the AC receptable.
3. Adjust the condensers, by means of hand tuning extensions, until the interference has disappeared. The entire unit is small, compact and completely encased.

Model WT-500 to be used to eliminate interference caused by a transmitter operating on the 10, 15, or 20 meter bands. Model WT-501 will eliminate interference caused by a transmitter operating on the 40 or 80 meter bands. Size of case 4¼" x 2¼" x 1¾".

BUD HF-600 HIGH PASS FILTER

The HF-600 high pass filter is designed to have a cut off frequency at 42 megacycles, thus this filter rejects signals from 0 to 42 megacycles. It is within this range that the majority of signals causing interference would be received. Since there is no attenuation above 42 megacycles, picture strength or quality is not affected.

This unit is easily installed and complete installation instructions are included. The filter is housed in an attractive aluminum case 3¼" x 2⅛" x 1⅛".

HF-600 Dealer Cost **$3.00**

A steel brace is furnished for use as a brace on the upper bracket and permits the supporting of heavy television antenna. Brackets are adjustable to accommodate masts 1½" in diameter. The AM-60 will allow a 12" space between the mast and the wall. The AM-89 will separate the mast from the wall by a space of 16". Supplied complete with lag screws and all other hardware.

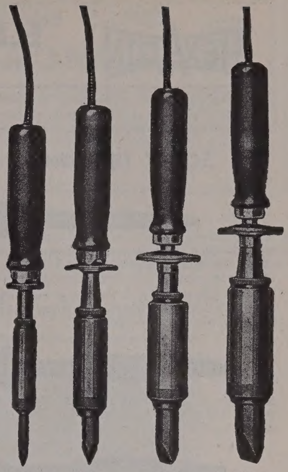
ELECTRIC SOLDERING IRONS

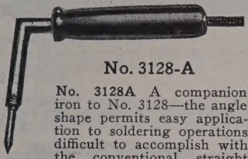
Embodied in these Electric Soldering Irons are features of construction and design that specialized experience — since 1894 — has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops; Army and Navy Services; in telephone, telegraph, radio and TV stations. Because of their proven efficiency and durability, they are preferred by those who measure the value of a tool by the service it renders.

No. 3138 Designed primarily for production and maintenance in radio, telephone, telegraph, ignition, switchboard and telephone installation work and similar industrial applications.

No. 3158 For the same purposes as the No. 3138 but for work requiring an iron of greater capacity.

No. 3178 For use on still heavier work; for light commutators, service and production work. A very useful iron for general purposes.





No. 3128-A

No. 3128A A companion iron to No. 3128—the angle shape permits easy application to soldering operations difficult to accomplish with the conventional straight No. 3128.

No. 3198 For heavy work of all kinds. Supplies a large volume of heat at high temperature. Used by manufacturers in many different lines; for shop, service, production work, etc.

TERMINAL CONDUCTOR ASSEMBLY

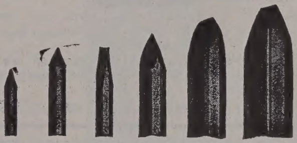
This illustration shows the Terminal Connector Assembly used in all American Beauty electric soldering irons. It is designed for use with either 2- or 3-conductor standard heater cord or rubber-covered cord—Types SJ, HSJ, etc.

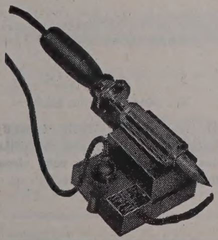
This assembly permits easy grounding for safety by a third conductor—particularly desirable when irons are used on 220-volt circuits or on metal benches accommodating groups of operators.

The cord is held firmly in place by a strain-clamp.

American Beauty COPPER TIPS

American Beauty Copper Tips are made from commercially pure, drawn bar copper rod and are heavily nickeled to resist corrosion and oxidation. Standard shaped tips with which various models are equipped are shown in illustration but pyramidal, instead of chisel type, and vice versa can be supplied when so specified without additional charge. For No. 3138 a special long, semi-chisel shaped tip (No. 3738-S) can be supplied for telephone, switchboard, television and radio work.





American Beauty TEMPERATURE REGULATING STAND

For use on (AC) Alternating Current Only

This is a thermostatically controlled device for the regulation of the temperature of an Electric Soldering Iron while at rest. Through an adjustment on bottom of stand the thermostat may be set for maintenance of any desired heat—from very low, or warm, to full working temperature. It is designed for use with Electric Soldering Irons up to 660 watts capacity and on circuits up to 240 volts.

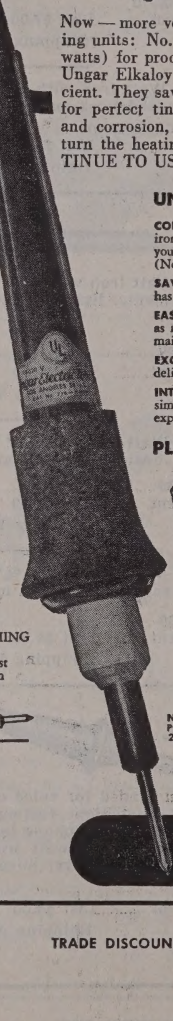
Now a Single Heating Unit Does the Work of THREE!

Now — more versatility with Ungar ELKALOY TIPLETS plus two thread-in heating units: No. 535 for general soldering (23½ watts) and the new No. 1235 (37½ watts) for production-line industrial soldering where more heat is required. Now—Ungar Elkaloy Tiplets make the famed Ungar Soldering Pencil 3 times more efficient. They save (1) Time (2) Money (3) Strategic Copper. Made of Elkaloy "A" for perfect tinning, stepped-up heat conductivity, and extra resistance to pitting and corrosion, each of the three tips threads into either of the heating units. In turn the heating unit fits the famed light-as-a-feather Ungar Handle. YOU CONTINUE TO USE THE HEATING ELEMENT WITH TIP AFTER TIP!



Check These Improvements in the Famous No. 776

Ungar Handle

Now Better Than Ever!

Check these features: Extra length brass shell firmly engages all threads, keeps heating unit tight; Spring action rivet assures positive contact; Extra flexible cord protected with molded Neoprene sleeve; Cooler handle of durable molded plastic, perfectly balanced; Form-fit cork grip; Ceramic insulation for double safety; Underwriters' listed (110-120V. 37½ watts).

No. 776 Handle & Cord Set only $1.15 ea.

NEW PROTECTIVE RUBBER SLEEVE fits over cord and prevents wear.

NEW FORM-FITTED CORK BUSHING keeps handle tilted at 10-degree angle — eliminates need for extra handle-rest — keeps hot tip pointed up, away from bench surface.

UNGAR ELKALOY TIPLETS SCORE THESE ADVANTAGES:

CONSERVES STRATEGIC MATERIALS. By substituting Elkaloy "A" for the tips, and iron for the heating units, we have helped solve the copper problem — and can assure you immediate delivery of heating units and Elkaloy Tiplets IN ANY QUANTITY. (Note: Nos. 537S, and 537C and 538 Tips have been discontinued until further notice.)

SAVES YOU MONEY because you no longer discard the heating unit when the tip has worn down. Long-lived heating units can be used over and over again.

EASIER TINNING. Elkaloy "A" requires no special tinning procedure. Does not oxidize as rapidly as copper. No flux or paste ever required. Eliminates unnecessary and costly maintenance.

EXCELLENT HEAT CONDUCTIVITY. Elkaloy "A" absorbs heat from heating unit — delivers it directly to point of contact.

INTERCHANGE TIPS EASILY AND QUICKLY. When Elkaloy Tiplet is worn down, simply unthread used tip with pliers and screw in new tip. Difference in co-efficient of expansion assures maximum heat conductivity — eliminates corrosion and gumming.

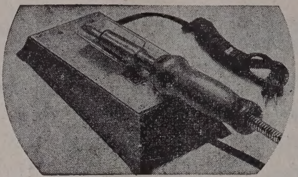
FOR FASTER SOLDERING . . . LONGER IRON LIFE

MAINTAINS DESIRED IRON TEMPERATURE BETWEEN JOBS • PREVENTS OVERHEATING
SAVES ELECTRIC CURRENT • ADJUSTABLE TO ANY SIZE IRON
SAVES TIME • NO LONG WARM-UP PERIOD



A practical, time and money saving device which accurately regulates and maintains soldering iron temperature between jobs. Lengthens iron life by reducing tip oxidation and amalgamation of tip with solder which increases with over-heating.

When placed on stand, iron rests in a copper cradle which conducts heat of iron and actuates a bimetal to open or close a switch. Temperature is easily regulated by an adjusting slide at bottom of stand. As iron is removed from stand, full current is instantly supplied. Stem rest adjustable to accommodate various lengths of irons. Stand is a heavy gray iron casting—stays firmly fixed without being fastened.

Multicore

World's Finest
3 CORE SOLDER

Plus PENTACOL

THE ONLY SOLDER MADE WITH NON-CORROSIVE, EXTRA-ACTIVE ERSIN FLUX

As a result of extensive research in the Multicore Research Laboratories, a "Tailored" molecule PENTACOL was evolved. Now, for the first time incorporated in Ersin Multicore Solder, it provides the following five advantages:

1. The careful formulation of Ersin Flux containing Pentacol has enabled a lower flux percentage to be standardized. You get more solder and less flux per pound, and, with correct soldering technique, dry and H.R. joints are avoided.
2. Pentacol is manufactured by a non-aqueous method which eliminates the possibility of any water being trapped in the rosin and causing corrosion. Ersin Multicore Solder containing Pentacol is guaranteed to be non-corrosive.
3. Pentacol is incorporated in the rosin by an intricate laboratory controlled process to form the Ersin flux. A completely separate process introduces the A.I.D. approved flux into the three cores of solder.
4. The activity of Ersin flux containing Pentacol dissolves the oxides and keeps the surfaces free from oxides until the solder has penetrated.
5. Ersin Multicore Solder containing Pentacol is non-toxic and free from unpleasant odor. The flux residue is non-hygroscopic, non-tacky, has high insulation value and is entirely non-corrosive.

TECHNICAL ADVANTAGES

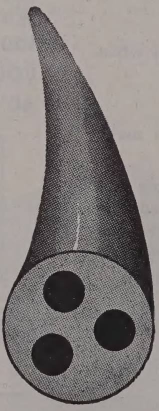
ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.



MULTICORE SOLDER

Three separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are three cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metalsand alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

COMSOL ALLOY

ERSIN MULTICORE SOLDER is now available in Comsol Alloy having a melting point of 296° C. This is 113° above the solidus melting point of usual tin/lead alloys. Comsol is a special soft silver solder. Hitherto it has been available only in ingots or in solid wire. Now, for the first time, it is available in the form of Ersin Multicore Solder.

The usual range of tin/lead alloys in which cored solders are supplied have a solidus melting temperature of 183° C. and liquidus temperatures of between 183° C. and 275° C. It should be noted that joints made with these tin/lead alloys may not possess sufficient strength if the components soldered are subjected to excessively high temperatures.

For this reason, ERSIN MULTICORE COMSOL SOLDER is especially suitable for soldering processes in the manufacture of electric motors, projector lamps and all products which are likely to undergo relatively high temperatures during their working life.

ERSIN MULTICORE COMSOL SOLDER is as easy to use as tin/lead alloys and the same procedure should be employed by applying the solder either simultaneously with the soldering iron or after the components have been heated by a torch or other means.

An outstanding feature of Comsol is a great improvement in resistance to creep by comparison with tin/lead solders, both at normal and at elevated temperatures. At 150° C., for example, a 50-50 tin/lead solder will fail under a load of 100 lbs. per square inch in approximately 10 hours. The following results were obtained with Comsol at the same temperature:

Load, Lb. per sq. in.	Time to failure
500	250 hours
250	about 1 year
100	No creep

PROPERTIES OF COMSOL.

Alloy	Composition	Melting range ° C.	Tensile strength tons/sq. in.	Elongation per cent	Electrical conductivity % IACS
Comsol	Silver-tin-lead	296	2.5	40	8.0

Ersin Multicore Solder in Comsol Alloy is supplied normally in 16 s.w.g. Other gauges are available to special order. The highest melting point Ersin Multicore Solder previously manufactured has been Pure Tin with a melting point of 232 ° C.

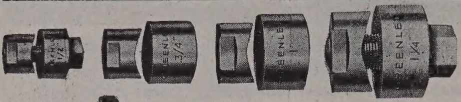
TOOLS FOR CRAFTSMEN GREENLEE

KNOCKOUT PUNCHES AND CUTTERS

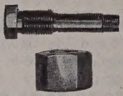
Greenlee Tool Co., Rockford, Illinois



NO. 735 KNOCKOUT PUNCH SET

Designed primarily for the electrical trade to permit fast, easy enlarging of knockouts and cutting of holes for conduit in metal boxes and cabinets. Also excellent for automobile work where holes are needed for heater pipes and other accessories. Simply insert the tool in a knockout or small drilled hole and give the screw a few turns with an ordinary wrench. No. 735 set has four punches for cutting ⅞, 1 3/32, 1 11/32, 1 11/16-inch holes for ½, ¾, 1, 1¼-inch conduit. Set is neatly packed in leather case illustrated. The ½-inch punch will cut a ⅞-inch hole for ½-inch conduit where no standard knockout is provided when a 7/16" hole is drilled.

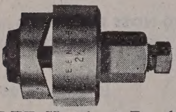
Heavy Duty Drive for ½" Punch



To increase length of service of the ½-inch Knockout Punch in cutting ⅞-inch holes in heavier-gauge sheet metals, the No. 1387 AV Drive Screw with No. 1388 AV Drive Nut illustrated is recommended.

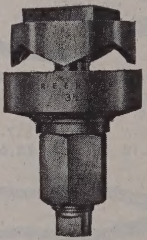
NO. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of only two punches for cutting holes to accommodate 1½" and 2" conduit. Packed in leather case.



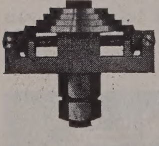
NOS. 738 AND 739 KNOCKOUT PUNCHES

For cutting holes to accommodate 2½" and 3" conduit. Design is similar to that of smaller GREENLEE Knockout Punches: insert in a knockout or drilled hole and turn drive nut with an ordinary wrench. Packed and sold individually.



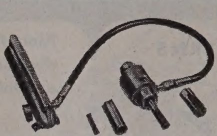
NOS. 741 AND 742 KNOCKOUT PUNCHES

For quickly making smooth openings for 3½" and 4" conduit. Hole is clean, no filing of burrs necessary. Operation is similar to that of other GREENLEE Knockout Punches. Simply insert in hole for 1" conduit and turn drive nut with an ordinary wrench.



No. 740 Knockout Cutter

Companion tool to GREENLEE Knockout Punches. Enlarges knockouts to take 1½, 2, 2½ and 3-inch conduit. Operation is simple since an ordinary wrench drives the tool. Cutting is done by the drive action of two wheel cutters. Special discs can be furnished for cutting odd sizes of holes from 1 15/16 to 3½-inch diameter. Packed in leather case.



NO. 7646 HydraRam KNOCKOUT PUNCH DRIVER

INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt, if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt.

If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread, it will be our "circumference around pulleys." In measuring belts always remember that the **circumference around pulleys** is not the same as **stretched out or cut length.** A belt when cut, develops approximately 3/16" extra length when stretched out, depending on thickness of belt.

KLIPZON Type V&C High Frequency Crystal Probes bring added versatility to laboratory and service test equipment. Reads to 200 Mc with 10% accuracy. Input capacity 3.5 Mmf. 400 V DC rating. Input resistance (approx.) .25 Meg-ohms @ 500 Kc, 150,000 Ohms @ 10 Mc, 25,000 Ohms @ 100 Mc. Reads .707 × positive peak of sinusoidal voltage. Type C adapts volt-ohm-milliammeters for indication and comparison of V.H.F. voltages. Type S

KLIPZON Type S Shielded Leads provide a reliable means of piping audio or radio frequencies in laboratory or service work. Di-electric of air and poly-ethylene is proportioned to provide unusually low capacity and loss even at U.H.F. while retaining strength, durability and flexibility of the lead. Complete shielding of leads eliminates stray pickups, feed back and other undesirable coupling effects. Lead length is 3 ft., O.D. approximately 9/32″, total capacity only 25 mmf. Provided with black Mini-prod Connectors at each end of lead for complete grounding of shield and red Mini-prods for connecting to circuit or instrument.
